Amaan Ullah Khan

Software Engineer at Rocket Software

Highly skilled Software Engineer with more than 8+ years of professional experience in design, development, implementation, maintenance and testing of complete software systems

amaanindia313@gmail.com

+91 9764790619

Profile

- **Software Engineer** in **Product** Development sector, currently with Rocket Software focusing on driving strategic technology innovation within the organization, offering **8+** years of substantial experience **developing internet applications, intranet applications, cards, payments and trading applications, scalable architectures, distributed systems and web security**. My niche skills lie in defining and establishing a full proof architecture of **product development** for service-oriented platforms. I work closely with clients, product owners, managers, BAs and business partners. My expertise revolves around **System Design, Data Structures, Algorithms, Low latency application, Platform Migration, SDLC methodologies, Developing API, Micro Services, Data Processing, Stream Processing, Kafka, Java based application, Monolithic applications, Cloud based application, Reporting, Test Driven Development**.

Achievements

- Awarded by Star Performer of the Quarter at **Rocket Software.**
- Awarded by Outstanding Performer of the year at **UBS**.
- Awarded by Manager's Choice Developer at **IBM** for strict deadline deliveries.
- Awarded by Outstanding Performer of the year in Cross Functional Delivery and Solution at **Infosys**.
- Awarded for SME of the project in very short period of time at **Principal Global Services.**
- **Topper** of the Computer Science Department.
- Won **state level ISTE** presentation.
- Winner of State Level football tournaments at university.

Expertise

- Expertise in **Data Structures, Algorithms and System Design**.
- Hands on in **HLD**, **LLD** and Architecture level decisions.
- Expertise in developing Web Applications using **Java, J2EE technologies, Servlet, JDBC, JSP, RESTful Web Services, Hibernate, Spring-IOC, Spring-MVC, Spring-Batch, Spring-Boot, Spring-Integration, Junit4, TestNG**
- Extensively worked on different databases like **Oracle, Mongo (NO SQL), DB2, MySQL, IBatis**.
- I had worked upon the **Kafka streaming** projects.
- Expertise in **Agile-Scrum, Agile-SAFe & Waterfall** Methodology
- Hands on experience in **Microservices using Spring Boot** and API management using **Cryptography, SSL, SOAP, Apigee, SOA, Token based**
- Hands on experience in **Multithreading.**
- Hands on Servers experience in **JBoss, WebSphere, Glassfish, Jetty, Tomcat**
- Hands on with project management tools like **Maven, Gradle, ANT**.
- Hands on experience in logging framework **Log4j, Logback, SL4J**.
- Different Reporting frameworks used **BIRT, POI, Itext, XSLT**.
- Process management frameworks used **JBPM, IBPM, MQ, JMS**.
- Batch Scheduling frameworks used **Autosys, Tivoli, Cron**, **Intellij, Eclipse, RAD, Toad, SQL developer, Vision Plus, Putty, WinSQL, Shell, Python**.
- DevOps Skills **BitBucket, Jenkins, SVN, Bamboo, Team city, Docker, GIT, Nolio, SONAR, JIRA, Confluence**

Key Impact Areas

Back End Development	Java Technology Expert
Product Development	Data Structures
System Design	Algorithms
Programming	Client / Team Management
Web Development	Agile

Soft Skills

Education & Credentials

- B.E in CSE with First Class (**69% aggregate throughout all semester**) from Government Engineering College Chandrapur

Professional Experience

Since Aug 2021: Rocket Software (Product Company)

Project: Admin Experience for DB2 database

Project Description: Admin Experience is designed for processing the high volume DB2 data which modernise the DBA experience from legacy mainframe-based system to modern systems and helps in analytical activities of DBA by visual and statistical representation to take **critical decision of database design,** migration, DevOps and lot more.

Technologies: Java, ReactJS, Graph DB, Restful web services, Java, Linux, DB2, Autosys, Shell, Spring boot, Azure.

Key Result Areas:

- Responsible for handling backend design, development, implementation, maintenance and testing of complete admin experience product
- Responsible for handling one of the key areas of Admin Experience named UMS.
- Java coding, unit testing and integration for Cost Calculation.
- Designing/Developing new features.
- Handled the complete engagement in SQL processing platforms.
- Implementing web services using spring, writing scripts in python, shell.
- Liaising with internal and external stakeholders for analysing and mapping client's needs and designing, developing, testing and deployments.

Previous Experience

Aug 2019 – Aug 2021: UBS (Swiss Bank)

Project: CATS (Regulatory reporting)

Project Description: Regulatory reporting is key area for any investment bank where banks expect best performance in terms of volume and accuracy. This project ultimately processes more than **4.3 billion (1.6 TB) data per day of equities in US market** for UBS. Based on stream processing with lightning speed so that all the orders should be reported to FINRA (US regulatory) on time with utmost accuracy.

Technologies: Kafka, Flink, Java, Linux, Oracle, Autosys, Shell, Python, React.js, Spring boot, Azure Cloud.

Key Result Areas:

- Responsible for handling one of the key areas of stream processing system named ECA.
- Part of developing a new complete pipelined stream processing for UBS reg reporting area.
- Java coding, unit testing and integration for Cost Calculation.
- Taking the owner ship of Kafka-flink processing of pipelined stream.
- Handled the complete engagement in cost calculations of different trade processing platforms.
- Implementing web services using spring, writing scripts in python, shell.
- Analysing/Fixing and finding the root cause of cost calculation setup.
- Liaising with internal and external stakeholders for analysing and mapping client's needs and designing, developing, testing and deployments.

May 2018 – Aug 2019: IBM as Application developer
Client: Barclays, UK

Project: Trade Capture Workflow

Project Description: Trade Capture Workflow has become inevitable for growth and profitability of Investment banking in present scenario marked by rising competition, technological advancement. It is a customer centric approach based on customer insight. Its ultimate objective is towards 'Trading' handling of brokers/traders/customers as distinct entities through the identification and understanding of their differentiated needs, preferences and behaviours. It processes the different types of **trades throughout the globe** including New York, London, Tokyo and Singapore. Implemented in distributed environment to support **fast processing**.

Technologies: JEE, Spring, SQL Server, Web services, Spring batches, Java Multithreading, Jboss server, XSLT, JAXB, Hibernate, Spring MVC, DB2, JavaScript, Bootstrap, mainframe.

Key Result Areas:

- Handled the complete engagement in file conversion and data exchange with different trade processing platforms. Implementing RESTful web services using spring. Analysing/Fixing and finding the root cause of data exchange failures. Java coding, unit testing and integration. Spring MVC implementation for UI request process. Bug fixing, Unit testing, Code review and Deployments. Managing the project/team with an offshore-onsite model.

May 2017 – Feb 2018: Principal Global Services as Software Developer
Client: Principal Financial Group, US

Project: Flash

Project Description: Leading Insurance provider in United States provides smooth and fast claim processing facilities to their customers. Flash is automated tool to process handwritten paper claims by using **IBM Watson OCR**. Flash comprises complete lifecycle of claim processing till the payment is done to the customers.

Technologies: JEE, Spring, Hibernate, Restful Web Services, Compute grid Batch, Spring Integration, Spring MVC, Mongo DB, Apigee, WebSphere server, JavaScript, JQuery

Key Result Areas:

- Leading the development effort for epic(feature), also part of design and architecture team. Coding for user stories to integrate of OCR. Configuring APIGEE for API-management and creating multiple proxy URLs. Implementing RESTful web services using spring. Java coding, unit testing and integration. Implemented batch to extract data for claim process. Spring MVC implementation for UI request process.

Feb 2014 – May 2017: Infosys Limited as Systems Engineer
Client: First data UK

Project: Dispute Resolution System (DRS)
Project Description: First Data is a global payment processing services group, providing banking, payment solutions to institutional, corporate and retail clients and counterparties around the world. Application comprises the process of raising, resolving and settling the disputes in financial institutes and banks by coordinating with **multiple payment processing systems**. It has complete lifecycle of disputes.

Project: PIN Web
Description: PIN Web is one of the **sensitive applications** developed and supported in Financial service industries. The system was developed to provide a global solution to the various banking platforms across the globe, providing **solutions to generate pin of the credit/debit cards**.

Technologies: Java, Spring, MVC, Spring Integration, JUNIT, AngularJS, Restful Web Services, Spring Batch, SOAP Web Services, Servlet, Cryptography, SSL, HTTPS connections, JBoss server.

Key Result Areas:

- Requirement Analysis, Coding, Unit Testing and Integration Testing in DEV/SIT/UAT, Deployment. Implemented encryption, decryption and digital signature, HTTPS connection, Spring Batch and security related work of the application, Worked on Integration and deployment of application on server. Performed Unit and Integration Testing and fixed bugs/defects. Participated in Program Increment planning, Scrum and daily stand up meetings involving development and BA teams.
- Responsible for implementation of letter generator, Downloader and Extractor engine used for downloading and extracting customer centric data. Accountable for the batch implementation to process data of dispute cases. Implementing the web services and testing the REST interface, Implemented multi-client session handling. Understanding the API specifications and designing, implementing design patterns and document repository APIs. Gathering requirements from customers for new features. Addressing the enhancement issues within the functionality of the product without affecting other functional areas. Developing new/additional features in the product to reach the goals of client side. Fixing existing issues in the system and also writing code for enhancement
