Profile Summary

- Excited, Eager & Curious to apply my expertise and skills efficiently, seizing opportunities for professional development, and making impactful contributions to both organizational objectives and personal advancement.
- Bachelor of Engineering with more than 6 years of experience as a software developer and good skilled in Node.js, React.js, JavaScript, MongoDB.
- Demonstrate and showcase valuable qualities: Analytical skills, Collaboration, Teamwork, Critical Thinking, Reliability, Determination, Honesty.

Experience

Phoeniix Systems Chennai, TN
Java Technical Trainee *July 2018 – May 2019*

- **Developing dynamic web pages using JSP:** This provided a seamless user experience with constantly updating content.
- **Integrating Java code into JSP pages:** This enabled server-side logic and dynamic content generation for a richer experience.
- **Implementing client-side validation with JavaScript a:** This increased data input accuracy and improved user interactivity.
- **Extensively using MySQL:** This ensured efficient data retrieval, modification, and management for smooth operation.
- **Developing MySQL procedures:** This facilitated complex data processing tasks such as loading and transforming data for a robust backend.

Staqi Technologies Private Limited Chennai, TN
Associate Software Developer *May 2019 – Nov 2020*

- Create and maintain code deployment using Kubernetes and Aws-cli.
- Actively manage, improve, and monitor cloud infrastructure on AWS, EC2, S3, EKS, CloudFront, CloudWatch, IAM and RDS, including backups and scaling.
- Reduced costs by eliminating unnecessary servers and setup Autoscaling.
- Deployed Docker containers to break up monolithic app into microservices, improving developer workflow, increasing scalability, and optimizing speed.
- Installed and configured Prometheus and Grafana to monitor services.

- **Technology:** React.js, Nodejs, WebRTC, Kubernetes (EKS, GKE, AKS), JavaScript, Kubernetes, Helm, Linux
- **Tools:** GitHub. Slack, Prometheus, Grafana

Datalligence.ai Private Limited Chennai, TN
Software Engineer *Nov 2020 – Aug 2022*

- It is a management method that assists businesses in developing and implementing specific plans and goals over a given period. Following that, an assessment is carried out to determine the success rate in achieving those objectives. OKR essentially aids you in defining your goals, tracking your progress, and analyzing the outcomes.
- We have a lot of features like OKR (Objectives & Key Results), CFR (Conversation, Feedback, and Reports), Survey, Assessment, Appraisal, LMS, etc.
- Creating an Objective is your first step in your OKR journey. Objectives and Key Results (OKRs). For a successful OKR journey, check in regularly to track your progress.
- An objective can contain many key results it's like sub-tasks and once the user completes their task then they should check in the key results after that progress is calculated itself.

- We provide two types of roles to the clients. They are Organization Admin and User. Moreover, we design all modules to contain two parts configuration settings and user access pages. The organization admin only has provisions to create, modify, view, and delete the configuration.
- We used typescript for the front-end, Antd for the design user interface and Node.js for the backend.

- **Technology:** React.js, Nodejs, Redux, Handlebars and Antd Framework
- **Database:** PostgreSQL
- **Tools:** GitHub, JIRA, Microsoft Teams, PG admin, Visual Studio IDE.

Thilash Services Private Limited Chennai, TN

Technical Lead *Aug 2022 – Current*

- Here I am working on two projects; we are intermediaries of both Amazon sellers and Amazon.
- **AMZ Online Arbitrage** finds profitable product deals from 1000+ online shops around the clock, allowing sellers to put their product sourcing on autopilot. And we have various plans like subscription methods. we have 2 different types of Dashboards. We have 3 Chrome Extensions.
    - **AMZ Admin Dashboard (Only accessible by Product Admin)**: The operation team works to get profitable deals from Amazon. And they are uploading the deals every day at 6:30 pm. Also, we have a subscription auditing tab. The subscription tabs consist of user details like who are all paid users, who are all not paid users and who are all payment failed users. The subscription details can be obtained from Stripe.
    - **AMZ Users Dashboard**: Once the team uploads the deals, then the users can access deals based on their plan. and we have an Asin Checker Chrome Extension. If they installed the extension, the extension would help them to check whether the products are restricted or not and it will also calculate the ROI and net profit.
    - **AMZ Infinity Chrome Extension:** The AMZ Multi-Tool will help Amazon sellers find the most profitable products. It has features like an integrated Keepa Graph, offering a comprehensive view of your average prices, BSR values, and an informative price history graph. Hazmat checks, seller eligibility assessments, brand IP verifications, seasonal product analysis, meltable item evaluations, and dimension checks. A user-friendly FBA & FBM calculator, Amazon sellers can effortlessly calculate Amazon referral, fulfillment, storage fees, and custom expenses.
    - **AMZ Asin Checker Chrome Extension**: This extension will help them to check whether the product is restricted on category or brand level. If the products are restricted, then the Amazon sellers are not able to sell the product from their amazon seller account.
    - **AMZ Asin Grabber Chrome Extension**: If they are searching for any product name or brand on Amazon.com, The Asin Grabber collects the ASINs and details of all products and then exports them locally with.csv format easily. You can also copy them to your clipboard.

- **TheFunnelGuru:** Most of the Amazon sellers face obstacles in getting approval for gated products due to limitations and restricted categories on Amazon. This becomes difficult for the sellers to achieve their business goals, thus bringing their profits and brand down. TheFunnelGuru is doing ungating services for Amazon sellers struggling to sell products in restricted categories/brands.
    - **Invoice Automation Tool:** It's an invoice automation tool, and it will connect with 140+ e-commerce websites. This tool is fully strategy oriented. If the customer is recurring (old), this tool will automatically generate the invoice based on their order from e-commerce websites. and it contains KeyCloak microservices for login authentication and AWEBER, Salesforce integration for customer activity tracking & email marketing, and OCR concepts for image processing and an integrated Kanban board for tracking the status of the invoice.
    - **TFG Asin Checker Pro Chrome Extension**: This extension will help them to check whether the product is restricted on a category or brand level. If the products are restricted, then the Amazon sellers are not able to sell the product from their Amazon seller account. and it displays whether the product applications are accepted by Amazon or not. and it has Filter Pro; it will sort the product by last month sales, review count, rating, minimal review count, and product name search (include/exclude). This extension connects with a payment gateway.

- **Technology:** React.js, Node.js, Next.js, KeyCloak, Aweber, Salesforce Antd, PM2, Vercel, MaterialUI, Aws Amplify, Aws Route53, AWS Service, Amazon Seller Partner Api Integration and Cloudflare
- **Database:** MongoDB
- **Tools:** GitHub, Microsoft Teams, Visual Studio IDE, Putty, Postman, MongoDB Compass, Clickup, Kanban Board, FileZilla.

Skills

- **Techstack**: React.js, Next.js, Node.js, JavaScript, Typescript, Handlebars, TypeORM, MySQL, Postgres, MongoDB, AWS SES, AWS EC2, AWS Amplify, AWS Cloudfront, AWS Route53, AWS S3, Firebase Authentication, Keycloak Authentication, AWS Eks, Azure AKS, Google GKE, Aweber, Salesforce, PM2, Google SSO, Docker.
- **Frameworks**: Antd, MaterialUI, Styled Components, Redux, Express.js
- **Databases**: MongoDB, MySQL, PL/SQL
- **Tools**: VSCode, Putty, Postman, MongoDB Compass, Git, Visual Studio IDE, Clickup, Kanban Board, FileZilla, Stripe, Vercel, Cloudflare

Education

Mangayarkarasi Higher Secondary School — Madurai, TN
SSLC — *2011 - 2012*

American College Higher Secondary School — Madurai, TN
HSC — *2013 - 2014*

NPR Group of Institution — Dindigul, TN
Bachelor of Engineering – Computer Science and Engineering — *2014 – 2018*

HOBBY PROJECT

- A comprehensive inventory management system using React and Node as a personal hobby project.
- Google Sheet Integration, Google SSO (Passport/Firbase), Gemini AI Integration, Google Location Tracking.
- Create Chrome Extension Amazon.

Achievements

- Game Changer of Quarter 4 — 2022
- Best Team of Quarter 4 — 2022
- Employee of the Year — 2023

Personal Details

- **Languages Known:** English, Tamil
- **Interest:** Cricket, Enhancing technical skills.
