Kuchana Deekshith

Data Scientist / Junior Developer

Portfolio: MathtoData.com
github.com/kuchanadeekshith
linkedin.com/in/deekshithkuchana

Enthusiastic B.Tech student in Computer Science, specializing in AI ML, seeking an entry-level position as a Machine Learning Engineer, Data Scientist, or Junior Developer. Proficient in machine learning algorithms, data analysis, and software development with experience in designing data-driven solutions. Currently completing the final year of a degree with practical exposure to innovative machine learning projects, accessibility features, and cloud-based deployments. Possess a strong foundation in deep learning, security considerations, and a readiness to go beyond expectations. Eager to leverage academic knowledge and skills in a dynamic environment, contributing to impactful projects and advancing professionally.

SKILLS

Programming Languages	Python, Java, C
Machine Learning Frameworks	Scikit-learn
Data Visualization and Analysis	Pandas, NumPy, Matplotlib, Seaborn
Databases	MySQL
Version Control	Git
IDEs	Jupyter Notebook, Visual Studio Code, Anaconda, Spyder
Web Technologies	HTML, CSS, Bootstrap
Soft Skills	Problem Solving, Teamwork and Collaboration, Communication Skills, Time Management

RELATED COURSEWORK

- Machine Learning, Deep Learning, Data Science, Algorithms, Data Structures, Statistics,Linear Algebra, Calculus, Python Programming
- Supervised and Unsupervised Learning, Deep Learning: Neural Networks, CNNs, RNNs, Natural Language Processing (NLP), Computer Vision, Feature Engineering and Selection, Model Evaluation and Hyperparameter Tuning, Data Preprocessing and Cleaning, Cross-Validation Techniques

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science (AI-ML) *Vaagdevi Engineering College* 2021-2025

Intermediate *Narayana Junior College* ***Result: 96.2%*** 2019-2021

CERTIFICATIONS

Cisco: Data Analytics Essentials, Introduction to Data Science

PROJECTS

Thyroid Classification

Thyroid Classification Developed a machine learning model for thyroid disease classification, achieving over 99% accuracy using Python, Scikit-learn, and Grid Search. Utilized Random Forest, SVM, STMO, and advanced hyperparameter tuning techniques to enhance diagnostic precision.

Bone Fracture Detection using X-ray images

Developed a Bone Fracture Detection system using YOLOv8, achieving 93%+ accuracy on X-ray images. The model leverages deep learning and computer vision techniques, utilizing image preprocessing, augmentation, and transfer learning to improve performance. Implemented bounding box localization and classification to detect and categorize fractures, reducing false positives and negatives. Optimized for real-time inference, the model is capable of fast, reliable diagnoses, enhancing the workflow of medical professionals. Deployed using PyTorch, OpenCV, and TensorFlow, it offers a scalable solution for automated medical image analysis.
