PROJECTS

IBM

Polaris, Yes Mobile, ASSD

Stack: Angular 10+, ADO, Jira, Devops

Description:

C2C migration UI interface of this application built in Angular and backend is Node.js/.Net.

Roles and Responsibilities:

Involved in C2C migration and DevOps tasks, including the integration of SonarQube, Veracode, and Twistlock, along with resolving related issues. Responsible for submitting requests for approval, managing DNS configurations, and generating SSL certificates. Additionally, leading the migration of projects from lower versions to higher versions. Post-migration, I address UI discrepancies to ensure alignment with the legacy application.

Delphi

Stack: Angular with JAVA

Description:

The banking application features a real-time dashboard leveraging a Socket.IO client and Elasticsearch to provide seamless access to 90 days of transaction records. have Realtime and elastic dashboards. Managing both dashboards used Panthergrid.

Roles and Responsibilities

- Responsible for end-to-end delivery of these projects.
- Developing new features as per client requirements
- Helping team members technically if they have stuck in any issues, apart from that helping projects setup or other project related issues.
- Bug root cause analysis & fixing the issues
- Analysis for new enhancements & Code implementation
- Involving in Code review of functionality implemented by other team members
- Troubleshoot various issues using debugging and coding techniques

Honda Application

Stack: React with AEM

Description:

The Honda website is a multilingual platform offering comprehensive information on cars and bikes. A customer can use Honda motorcycles digital sales channel to engage with self-serve experiences including creating a user account, saving a bike configuration, saving a finance quote, scheduling a test drive, selecting a preferred dealer, sharing details with a preferred dealer, submitting an order request, and paying a reservation fee. Motorcycle dealers can see details which customers

choose to share with them (as their preferred dealer) via the Dealer View. They can see customer details, configurations, finance options, test drive requests, order requests and the payment of reservation fees.

Roles and Responsibilities

- Understanding the Business requirements and analyze the Requirements
- Developing new features as per client requirements
- Bug root cause analysis & fixing the issues
- Analysis for new enhancements & Code implementation
- Involving in Code review of functionality implemented by other team members
- Troubleshoot various issues using debugging and coding techniques
