Gyanesh Sharma

Full stack Developer (Javascript | Java)

Profile

Full-stack developer specializing in React frontend with webpack, redux, saga, JSS, axios. Experienced in Java API development with Struts, Hibernate.

Work Experience

Software Engineer II at Highradius, Hyderabad
January 2024 — Present

- Designed and optimized backend modules resulting in efficient management of data volume and user traffic, ensuring scalability and performance.
- Developed flexible, scalable React UI components to be reused across the software for development efficiency and maintainability.
- Integrated React application into ExtJS architecture, managed authentication via JWT tokens for seamless data exchange across domains.

Software Engineer I at Highradius, Bhubaneshwar
January 2023 — January 2024

- Integration of 3 ML use cases to the product resulting in actionable insights and improved decision-making capabilities for users.
- Collaborated with the cybersecurity team to remediate issues identified by security tools such as Checkmarx and WhiteSource, increasing the security score from 65% to 90%.
- Mentoring and guiding new interns in expanding their knowledge base technically and functionally.
- Led the refactoring efforts of legacy code with respect to new security and industry regulations.

Associate Software Engineer II at Highradius, Bhubaneshwar
July 2021 — January 2023

- Java Struts Spring Hibernate as Back-end tech stacks & SQL + Snowflake for database, to create APIs and cron based agent applications.
- Developed a React-based product from scratch with a team of five, showcased at the company Unconference, securing new sales opportunities

Associate Software Engineer I at Highradius, Bhubaneshwar
September 2020 — June 2021

- Implemented scalable React application with frameworks like redux, sagas, MUI, axios, etc, and strict adherence to the design guidelines ensuring high quality UX
- Developed RESTful APIs with Apache Struts framework providing seamless communication between client and server-side components
- Applied agile methodologies and worked closely with PM, architect and UX designers to deliver smooth development of Automated Collections product in Order to Cash cycle.

Education

B. Tech. | Computer Science, KIIT University | 8.0 CGPA, Bhubaneshwar
June 2016 — June 2020

12th, DAV Public School | 77%, Patna
March 2016

10th, DAV Public School | 8.0 CGPA, Patna
March 2014

Projects

Collections Application,

September 2020 — November 2021

* Moved all older class-based components to more reliable, faster and lightweight functional components.

* Converted major and repetitive functionality to react hooks.

* Enhancement and support for continuing software.

* Worked on a digital assistant with React single page application to smartly assist the collections analysts using predictive AI.

Credit Application,

November 2021 — May 2024

* Developed application from scratch using webpack, React, Redux, Saga, React Router, and MUI themes.

* Implemented developer sanitation tools: ESLint, Prettier, Husky.

* Established proper folder structuring for modules, components, utilities, and helpers.

* Integrated REST APIs with the backend system.

* Developed Advanced search component with flexibility and scalability as per user needs.

* Developed reusable React components for text, numbers, amounts, tables, and cards, which remain integral tools utilized organization wide.

* Showcased project at Unconference, attracting customers and driving product adoption.

* Implemented screen summarization powered by ChatGPT.

Analytics Application,

May 2024 – Present

* Upgrade And enhance the existing react project by setting up tools such as Prettier, EsLint, Husky, Git build pipelines for better code standards and developer efficiency.

* Create charts and dashboards with React using Highcharts library to view large sum of aggregated data fetched from the database.

* Managed 3 different SQL/NOSQL (MySQL, Snowflake, Clickhouse) databases dynamically to fetch data according to the needs of the customer and products.

* Assume complete ownership of the project lifecycle, including design, development, and testing, while collaborating effectively with the Project Manager, Quality Assurance Architect, and UX Designers to ensure comprehensive story delivery.

* Worked as a Senior developer and mentor the team for User story designing and best coding practices. I was also involved with doing code review and TDS reviews for the team.
