Role And Responsbility

- Collaborated with development teams, business analysts, and clients to understand requirements and create comprehensive test strategies.
- Designed, developed, and executed manual test cases for functional, regression, integration, and UI/UX testing across web and mobile platforms.
- Performed API testing using Postman, validating request/response structures, status codes, and backend data accuracy.
- Worked in Agile/Scrum environments, attending daily stand-ups, sprint reviews, and retrospective meetings for continuous delivery and improvement.
- Used Jira for bug tracking and test management, logging detailed defect reports with reproducible steps and screenshots.
- Conducted cross-browser testing and device compatibility testing to ensure seamless user experience across platforms.
- Coordinated with clients directly for UAT (User Acceptance Testing), feedback collection, and production deployment support
