GOWTHAMI UPPULA

uppula8.gowthami@gmail.com | +91 6361575304

PROFESSIONAL SUMMARY

Frontend Developer with **5.5+ years of experience** specializing in **React.js, Next.js, Redux Toolkit, TypeScript, JavaScript (ES6+), HTML5, CSS3, and Material-UI**. Proven ability to **build scalable, maintainable, and high-performance web applications** with a strong focus on code re-usability, performance optimization, and clean architecture. Hands-on experience working with **CI/CD pipelines**, **unit testing frameworks**, and **multi-tenant application architectures**. Skilled at **collaborating with cross-functional teams** in Agile environments to deliver robust, user-focused solutions.

Proficient in leveraging **AI-driven tools such as GitHub Copilot** and other **modern AI-assisted development platforms** to accelerate productivity, improve code quality, and drive innovation. Passionate about continuous learning, mentoring team members, and delivering intuitive UI experiences aligned with business goals.

CORE COMPETENCIES

Frontend: React.js, Next.js, Redux Toolkit, Context API, TypeScript, JavaScript (ES6+), HTML5, CSS3, SCSS

UI Frameworks: Material-UI, Bootstrap, Styled Components

Build & Tools: Webpack, Babel, ESLint, Prettier, npm.

AI & Automation Tools: GitHub Copilot, AI-assisted Code Review, VSCode IntelliSense

Version Control & CI/CD: Git, GitHub Actions, Bitbucket Pipelines

Testing: Jest, React Testing Library.

APIs & Architecture: REST, GraphQL, Axios, Multi-Tenant Application Design

Project Methodologies: Agile / Scrum, Jira, Confluence

PROFESSIONAL EXPERIENCE

Innomax Solutions, Hyderabad (Infosys)

Senior Software developer | June 2025 – Present

Project – CAM (Customer Account Management Application)

Tech Stack: React.js, TypeScript, Redux, Material-UI, CSS, Node.js, Express.js, Mustache.js (legacy).

Led the front-end migration of the CAM (Customer Access Management) application from server-side rendering (Mustache.js + TypeScript + Express.js) to a client-side React.js architecture, improving maintainability, performance, and scalability.

Transformed legacy server-rendered templates into modern React.js components using Material-UI, enhancing UI responsiveness and user experience.

Designed and implemented a multi-tenant structure that supports both intra-tenant and enterprise-level domains, allowing different clients to use customized configurations and data insolation.

- Built reusable React components, integrated Redux Toolkit for predictable state management, and ensured global theming using Material-UI.
- Collaborated with backend teams to decouple front-end logic from server templates, ensuring a fully API-driven architecture.
- Integrated tenant-based routing and environment-specific configurations dynamically determined from domain/host context.
- Enhanced API integration layer using Axios and TypeScript interfaces for type-safe data fetching across tenants.
- Improved deployment efficiency through CI/CD pipelines. automated build, test, and deployment for multiple tenant environments.

- Ensured smooth transition of users from SSR to CSR by maintaining backward compatibility for specific legacy modules.

- Collaborated with architects and Develops teams to maintain consistent tenant configurations and faster onboard for new clients.

Happiest Minds Technologies, Bengaluru

Module Lead | June 2023 – May 2025

Project – Nile (WiFi Surveillance System)

Acted as sole frontend developer for a large-scale WiFi surveillance web platform, collaborating closely with the solution architect and backend client teams.

Designed and developed a responsive, scalable, and modular UI using React.js, TypeScript, and Material-UI, ensuring consistent UX across multiple device types.

Implemented Redux Toolkit and React Hooks for efficient state management and modular logic separation.

- Created reusable component libraries and utility hooks to promote code re-usability and maintainability.
- Integrated APIs for WiFi device configuration and building management using Axios, handling large datasets dynamically.
- Developed tenant-based configurations and environment-based routing for intra and enterprise domains.
- Built CI/CD pipelines using GitHub Actions and Jenkins for automated build, test, and deployment processes.
- Conducted code reviews, optimized rendering performance, and fixed production-level issues proactively.
- Written unit test cases (Jest + React Testing Library) to achieve 80%+ coverage and improve system reliability.

Project – CareerEdge (Job & Training Platform)

- Developed and maintained a career development and job training portal using Next.js for SSR and React.js for dynamic UI rendering.
- Created user dashboards, mentor/learner modules, and content management pages with Redux state management and Material-UI components.
- Optimized application SEO and performance by leveraging Next.js re-rendering and code-splitting features.
- Implemented form handling, file upload modules, and API integrations using TypeScript interfaces for better type safety.
- Collaborated with back-end engineers and product designers to ensure pixel-perfect UI and accessibility compliance.
- Improved page load times by 30% through lazy loading and memorization strategies.
- Managed CI/CD integration with Jenkins for automated deployments and version control across environments.
- Contributed to component documentation and design consistency for the entire product team.

Project – GradeAI (AI-based Assessment & Evaluation Platform)

- Developed an AI-powered educational assessment tool using Next.js, React.js, and Redux, enabling intelligent grading and progress analytic.
- Built dashboards for teachers and administrators to visualize student performance with dynamic chart components.
- Integrated AI-generated feedback modules using RESTful APIs, ensuring real-time interaction and data updates.
- Implemented role-based access control (RBAC) and protected routes for admin, teacher, and student views.
- Designed responsive and accessible UI layouts using Material-UI and custom CSS modules.

- Improved application performance by refactoring complex components and reducing re-renders with React.memo.
- Collaborated with QA and DevOps teams to streamline CI/CD testing and deployment pipelines. Ensured cross-browser compatibility and responsiveness across desktop, tablet, and mobile devices.

Key Achievements at Happiest Minds

Successfully delivered three enterprise-grade applications (Nile, CareerEdge, and GradeAI) within tight deadlines and with minimal production issues.

Introduced code standardization and reusable component libraries, improving development speed by 25%. Achieved 80%+ test coverage across critical modules using Jest and React Testing Library.

Recognized by leadership for independent project ownership and multi-tenant architectural contributions.

Napier Health Care Solutions Pvt. Ltd., Hyderabad

Senior Software Engineer (Frontend – React.js) | *Sep 2022 – June 2023*

Tech Stack: React.js, Redux, JavaScript (ES6+), Material-UI, CSS3, HTML5, AG Grid, Axios, REST APIs.

- Worked on the **Hospital Information System (HIS)** platform, focusing on **Pharmacy** and **Patient Registration** modules.
- Designed and developed **custom dynamic forms** that allow healthcare administrators to configure form fields and logic dynamically without code changes.
- Implemented **form-driven workflows** using React.js, enabling dynamic validation, conditional rendering, and real-time data updates.
- Used **AG Grid** extensively for implementing **data grids** with sorting, filtering, pagination, and inline editing to manage large medical datasets efficiently.

- Integrated REST APIs for **real-time synchronization** of pharmacy stock details, patient profiles, and registration data.
- Improved application responsiveness and performance by optimizing component re-renders and API calls.
- Collaborated with backend and QA teams to deliver **error-free, user-friendly UI experiences** for hospital staff and administrators.
- Followed **Agile methodologies**, participated in sprint planning, and provided technical inputs for UI improvements and usability enhancements.
- Contributed to **reusable form components and grid configurations**, reducing repetitive UI code by 30%.
- Worked with **Material-UI** for consistent design systems and maintained accessibility standards across modules.

Metrolabs Pvt. Ltd., Hyderabad

Frontend Developer (React.js) | *Jul 2020 – Sep 2022*
Intern – Frontend Development | *Jan 2020 – Jun 2020*

Tech Stack: React.js, JavaScript (ES6+), HTML5, CSS3, Material-UI

- Started career as a **Frontend Developer after a successful 6-month internship**, where I learned React.js fundamentals, project setup, and component-based architecture. Developed and maintained **responsive user interfaces** using **React.js, HTML, CSS, and Material-UI**, ensuring consistent design and cross-browser compatibility.
- Built multiple **reusable React components** following Material-UI design standards to maintain a cohesive and scalable UI system.
- Implemented **form validations** and state management using React hooks and context to improve data handling efficiency.

- Collaborated with backend developers to integrate RESTful APIs and ensure smooth front-end data flow.
- Worked closely with senior developers during code reviews and feature development, gaining practical knowledge of **Agile processes** and version control best practices (Git).
- Contributed to documentation and testing of UI components to enhance maintainability and ensure smooth team onboarding.

ACADEMIC DETAILS

Bachelor of Engineering (B.E) – Information Science & Engineering

Aditya Engineering College, JNTUK – 2018

CERTIFICATIONS

Namaste React.js – by Akshay Saini

Comprehensive course covering React fundamentals, hooks, component architecture, state management, performance optimization, and modern patterns. Redux and Redux Toolkit for predictable state management, middleware, and integration in large-scale React applications.

Namaste Node.js – by Akshay Saini

In-depth learning on backend development, Node.js internals, Express.js, middleware, routing, and API integration principles.

NextWave CCBP 4.0 Certification – Frontend & Backend Developer Track

Full-stack development program specializing in React.js (frontend) and Node.js + Express.js (backend), covering deployment workflows, GitHub CI/CD, and modern JavaScript ecosystems.
