VIGNESH MANIKANDAN

Seasoned Web dev
SSE @ Freshworks, Ex-HPE Aruba

Adept *Frontend Engineer* with extensive *full stack experience* and *7+ years* of delivering scalable, user-centric solutions that enhance productivity and operational efficiency. Skilled in leading impactful projects, modernising architectures, and mentoring teams to maintain engineering excellence while aligning technical initiatives with business objectives.

PROFESSIONAL EXPERIENCE

2022 - Present

Senior Software Engineer II
Freshworks, Chennai

- Led the design and implementation of resilient, fault-tolerant modules for Freshsales integrations, enhancing system availability.
- Migrated critical modules from Ember.js to ReactJS, boosting performance and user satisfaction.
- Collaborated with product managers to integrate features that reduced churn risk.
- Shipped bug-free features for a One CX Product (A Freshdesk initiative)

Tech stack: ReactJS, Ember.js, AWS, Kubernetes

Apr '22 - Jul '22

Software Development Specialist
HPE Aruba Networking, Bengaluru

- Established development best practices, reducing feature delivery timelines by 20%.
- Developed a reusable Angular Material component library, streamlining UI development.

Apr '20 - Apr '22

Software Designer II
HPE Aruba Networking, Bengaluru

- Spearheaded the migration from monolith to microservices, enabling modular and scalable architecture.
- Developed micro frontends using ReactJS and Angular, incorporating localisation (i18n).
- Automated regression testing with Python, improving QA efficiency by 30%.

Tech stack: ReactJS, Angular, Python, Docker, IBM Watson, AWS

Aug '18 - Apr '20

Software Designer I
HPE Aruba Networking, Bengaluru

- Built and deployed SPAs using AngularJS and Angular 7.
- Led the R&D for an NLP-based app-wide search project, leveraging IBM Watson.

Tech stack: Angular, Python, Docker, IBM Watson, AWS

EDUCATION

Jun '14 - May '18

B.E. Computer Science & Engineering
Anna University, Chennai

- Graduated with high honours
- Built an NLP based smart mirror application for the final year capstone project using Electron and native JS/HTML/CSS code.

CGPA: 7.4

KEY ACHIEVEMENTS & PROJECTS

Smart Mirror – Capstone Project
Developed Alexa skills for a Raspberry Pi-based MagicMirror project, implementing multi-accent speech recognition and hot-word detection.

AI Search – Aruba Central
Streamlined the onboarding workflow for network administrators in a Network Management System (NMS) by engineering an NLP-driven intent recognition module. This solution leverages natural language processing to parse and semantically interpret user queries, dynamically retrieving system metrics, configurations, and KPIs. The implementation significantly reduced the dependency on in-depth system knowledge for effective operation.

Notes, Web forms – Freshsales
Architected and implemented high-impact features, leveraging end-to-end development expertise to deliver solutions like Notes and Web Forms that drove significant user productivity and adoption metrics. Modernised the codebase by migrating legacy modules from Ember to React, enhancing performance and maintainability. Engineered robust integration pipelines with a focus on high availability and fault tolerance, while collaborating with stakeholders to align technical deliverables with user requirements and strategic objectives.
