EDUCATION

Bachelor of Technology

Lendi Institute Of Engineering And Technology 2019 - 2023

Computer Science and Systems Engineering

CGPA : 8.68 **Vizianagaram**

Intermediate 2017 - 2019

Sri Chaitanya Junior College

CGPA : 8.36 **Visakhapatnam**

High School 2016 - 2017

St. Andrews High School

CGPA : 8.30 **Visakhapatnam**

SKILLS

Languages: Python, HTML, CSS, JavaScript
Frameworks & UI: Bootstrap
Databases: MySQL, SQL Server, Posture SQL
Cloud Platforms & Services: Microsoft Azure (IaaS, PaaS), Azure CI/CD Pipelines, Azure DevOps, Azure ARM Templates, Cloud Infrastructure, Scalability, Cost Optimization, System Availability
DevOps & Automation Tools: Terraform, Ansible, Docker, Kubernetes, Infrastructure Provisioning, Configuration Management
APM & Monitoring: Dynatrace, PagerDuty, System Performance Monitoring
Enterprise & Collaboration Platforms: Microsoft Platform, SharePoint, ERP, Virtualization, Networking

SUMMARY

Cloud Engineer with expertise in designing and automating cloud solutions (IaaS, PaaS) for global financial institutions, including PayPal. Skilled in CI/CD pipelines, Terraform, ARM templates, Ansible, Docker, and Kubernetes. Experienced in cloud infrastructure management, system performance monitoring (Dynatrace, PagerDuty), scalability, and cost optimization. Strong problem-solving, adaptability, and collaboration skills.

WORK EXPERIENCE

- **Temenos** **10/2023 - till date**

Associate Saas Engineer

- **Disaster Recovery (DR) Automation:** Managed DR configurations by automating the transition from production to DR environments, ensuring high availability and minimal downtime—aligned with Kubernetes-based deployments and Infrastructure as Code (IaC) practices.
- **Automated Monitoring for Client Environments**: Deployed end-to-end observability using Dynatrace, Azure Monitor, and Log Analytics Workspace, integrating these tools with containerized workloads and Kubernetes clusters for real-time system insights.
- **T24 COB Monitoring with Automation:** Designed COB monitoring using Dynatrace and PowerShell, streamlining nightly batch operations and integrating alerts into DevOps workflows for proactive incident handling.
- **Dynatrace Expertise in Cloud-Native Setups**: Hands-on experience with Dynatrace in microservices architectures, enhancing observability in cloud-native deployments.
- **Custom Observability Plugins**: Developed Dynatrace plugins (e.g., file checker, WAR file monitoring) to improve visibility into application components running within containers.
- **CI/CD with Azure DevOps:** Built and maintained pipelines in Azure DevOps to automate deployment of JAR files and core updates for T24 applications, with potential extensions to Kubernetes manifests and Helm charts.
- **Azure Resource Tagging Automation:** Automated tagging of Azure resources using scripts, optimizing cost management and governance across cloud-native workloads.

CERTIFICATIONS

- Certified Microsoft Azure Administrator (AZ - 104)
- NPTEL Certification in Data Science for Engineers
- NPTEL Certification in Data Mining
- Salesforce Certified Associate
- Certified Microsoft Azure Fundamentals (AZ - 900)
- Essential Programming Skills in Python

PROJECTS

- **AUTOMATING COB OPERATIONS IN ONE UI**

Designed and implemented a model to automate COB (Close of Business) operations, reducing manual effort and improving efficiency. Developed a front-end UI that consolidated critical information and integrated Dynatrace dashboard URLs for centralized monitoring. Automated update processes using Task Scheduler, enabling real-time insights and seamless tracking of COB activities. This solution enhanced system reliability, scalability, and overall performance visibility.

- **MACHINE LEARNING-BASED DISEASE PREDICTION:**

This project leverages machine learning to forecast diseases. Users can enter their symptoms along with other important details, including age, gender, and medical history. The website then employs a machine learning model to estimate the likelihood of the user having a specific disease. Additionally, it offers valuable information about the disease, including symptoms, treatment options, and prevention tips.

The machine learning model utilized in this project is a support vector machine (SVM). SVM is a supervised learning algorithm effective for both classification and regression tasks. In this project, the SVM model is trained on a dataset consisting of diseases and their associated symptoms. It learns to link symptoms with diseases, using this knowledge to predict the probability of a user being affected by a particular illness.

Developed using Python, the website was created with the Django framework, while the machine learning model was implemented through the scikit-learn library. This project has the potential to assist individuals in identifying potential diseases at an early stage.

- **COVID WEBSITE TRACKER**

This project involves a website that displays active COVID-19 cases along with other useful information through the use of APIs. The site is updated in real time, ensuring that users receive the most accurate data available. By employing APIs for real-time updates, users can trust that the information they access is reliable.

The benefits of this project include:

- Offering users current information about COVID-19
- Assisting individuals in staying safe and informed throughout the pandemic

Serving as a valuable resource for government agencies and healthcare organizations.

ACHIEVEMENTS

1. Received the Tstar Award at Temenos for automating a manual task that typically required one week to complete, reducing execution time to one hour and significantly minimizing employee workload.
2. Awarded the Tstar Award at Temenos for building end-to-end alert configurations within a short timeframe.

PERSONAL INFORMATION

D.O.B - 26/12/2001
