CHINTHAKUNTA SIVA PRASAD
TECHNICAL SUPPORT ENGINEER
Phone : +91 9391615905
Email : chinthakuntasivaprasad6@gmail.com

Objective:

To pursue a professionally satisfying career in a progressive organization, where I can exhibit my analytical, logical and inter-personal skills and contribute to the progress of the organization and grow with the organization.

Technical Skills :

- Operating System : Linux, Windows.
- Bug Tracking Tools : JIRA.
- Ticketing Tool : Service Now. Help Desk (Gurukul).
- Collaboration tool : Confluence.
- Cloud Service : AWS (EC2, IAM, S3, RDS, VPC, EMR, Cloud Watch)
- APM Tools : ELK Kibana, Grafana, App Dynamics, Dynatrace.
- CI/CD Tools : Jenkins.
- Data bases : Mongo DB, My SQL.
- Application Servers: Apache Tomcat
- Web servers : Apache and Nginx
- API : Postman
- Version Control : Git and GitLab.
- Containerization : Docker,Kubernetes(K8s).
- Integration : Kafka & Hadoop.
- Automation Tool : Shell script.

Professional Experience

Current Project: Cybersecurity Analytics and Treat Detection. Client: Gurucul Solutions Pvt. Ltd.
Role : Technical Support Engineer.
Duration : August 2023 to August 2025.
Technologies used: Linux, Help Desk (Gurukul), Service Now, APM, AWS Service, Nagios, MYSQL, API Postman, Hadoop, Kafka, Crate, Shell script, JIRA, Confluence, Docker, Git and GitLab.

Previous Project : Piramal Capital & Housing Finance
Client : Piramal Capital & Housing Finance Limited,
Role : Production Support Engineer.
Duration : JULY 2022 to May 2023 .
Technologies used: Service Now, MYSQL, Mongo DB, Kibana, Grafana, API Postman, PG Admin, JIRA, Confluence, Docker, Git and GitLab.

Prev Project : Razorpay payment(PCIDDS).
Client : Razorpay
Role : Production Support Engineer
Duration : Dec 2020 to July 2022.
Technologies used : Jenkins, MYSQL, Kibana, Grafana, AWS, Linux, and Web Logic, ServiceNow, API Postman, APM, Docker, Git and GitLab.

PROJECT SUMMARY:

Current Project:

Gurucul is a cybersecurity company offering advanced solutions in Security Information and Event Management (SIEM), User and Entity Behavior Analytics (UEBA), and Security Orchestration Automation and Response (SOAR). The project involves providing L2 production support for Gurucul's Security Analytics platform used by enterprise customers for threat detection, insider threat monitoring, and incident response.

As part of the L2 support team, responsibilities include proactive monitoring, issue triaging, incident resolution, performance tuning, system stability, and working closely with L3 engineering and DevOps teams for escalations and RCA

Work Experience :

Technical Support Engineer:

- Having over 4+ years of experience in Technical Support and Production Support handle incident management and ticket resolution through systems like Jira/ServiceNow
- Managed and troubleshooted **AWS EC2 instances** hosting SIEM and analytics services, including instance restarts, security group configuration, and volume management.
- Performed EC2-level health checks for CPU spikes, memory leaks, and application crashes, ensuring 24x7 uptime for critical customer environments.
- Develop and maintain technical support documentation. Identify ways to maximize the potential of the applications used.
- Monitored container health and performance using tools like docker ps, docker stats, and logs.
- Built and maintained **Docker** images for microservices using optimized Docker files.
- Automated container restarts and scaling using **Docker** Compose and **Kubernetes** (EKS) deployments.
- Collaborated with developers to containerize applications and ensure consistent environment setup across environments.
- Managed Git repositories for codebase versioning, branching, and merging in collaborative environments.
- Created and maintained **GitLab CI/CD pipelines** for automated build, test, and deployment processes.
- Handled production support code rollbacks, tag creation, and hotfix releases using **Git** and **GitLab**.
- Participate in upgrades, instance creation, application releases, and the transition from development, testing, to deployment into production.
- Experience with Hadoop to monitor and configure the standalone installation, and understanding of the HDFS file system.
- Monitored Kafka broker health, cluster status, and topic utilization using tools like **Kafka** Manager and command-line utilities.
- Resolved Kafka consumer lag issues by adjusting consumer group configurations and rebalancing partitions.
- Troubleshot HDFS issues like under-replicated/missing/corrupt blocks and resolving node failures (Data Node, Name Node, Node Manager, Resource Manager).
- Utilized joins, subqueries, and aggregations to support data consistency checks across security events and alerts.
- Performed **Linux-based troubleshooting** including log analysis, service restarts, disk/memory usage checks, and permission management on RHEL/CentOS servers.
- Automated repetitive tasks using **Shell scripting** to streamline routine health checks and alert monitoring.

- Use AWS CloudWatch tools to track the performance, health, and usage of AWS resources and services
- Test new features or updates to ensure they work as intended before release to customers. Take backups of MySQL database dumps, and restore them when required.
- secure access control and performed cloud-based troubleshooting. Good experience in network protocols such as HTTP, TCP, FTP/SFTP, DNS and SSH.
- Involved in troubleshooting errors and job failures of highly critical applications and handling outages and production issues.
- Involved in troubleshooting errors and job failures of highly critical applications and handling outages and production issues.
- Have a good knowledge and experience in monitoring tool like Kibana, Grafana, Dynatrace.
- Used **Postman** to test and validate REST APIs for security alerts, incident creation, and rule management.
- Created and maintained collections for repeated API testing in various production and staging environments.
- Collaborated with Dev teams to replicate customer issues involving API failures or integration bugs.
- Responsible for Maintain and monitor all patch releases and design various patch installation strategies and maintain all systems according to customer requirement.
- Monitor and manage support queues on a day-to-day basis to ensure SLA'S are met and to ensure a high-level customer satisfaction.
- Handling the flow of the payment system process and related issues.
- Home loans, business loans, personal loans and loan against mutual fund. having hands of experience in the in house-built Application where the loan initial stages are started through SALES Center Application.
- By using Postman I can check client-server requests to make sure everything works on the server side as it is expected, the most commonly used HTTP methods are GET, POST, PUT, PATCH, HEAD, DELETE, and OPTIONS.
- Acted as a technical point of contact for enterprise customers, providing real-time updates during critical incidents and post-issue RCA discussions.
- Participated in weekly client meetings to review ticket trends, deployment plans, and environment health status.
- Diagnosed issues in **Kubernetes clusters** related to pod crashes, container restarts, failed deployments, and resource limits.
- Used `kubectl` to investigate logs (`kubectl logs`), describe pods, and analyze service discovery/networking issues within microservices architecture.
- Collaborated with DevOps and L3 engineering teams to apply rolling updates, scale deployments, and fix Helm chart misconfigurations.
- Utilized **AWS CloudWatch** to monitor logs, system metrics, and application health for real-time alerting and performance troubleshooting.

Declaration :

I hereby declare that the above written particulars are true to the best of my knowledge and belief.

Siva Prasad
