JOB RESPONSIBILITY

- Achievement-driven professional with an experience of 4.5+ years.
- Experience in building applications with Artificial intelligence, Machine Learning, Deep Learning, Computer vision, NLP, Generative Al and Python.
- Having the 4.6+years of experience in the Jira Confluence Cloud, Mercurial and Tortoise - Developing End To End Data Science and Genai Projects.

WORK EXPERIENCE

Junior Data Scientist
BETA CAE Systems India Pvt.Ltd 07/2021 – Present Hyderabad, India

Project - 1: Finance Complaint.

- Analyzed historical complaint patterns through quantitative methods to build predictive models; findings directly addressed three major causes of unresolved issues; leading to improved response strategies and enhanced user trust in services.
- Created automated workflows integrating machine learning insights into operational processes with the goal of resolving issues quickly while maintaining high standards-directly improved case handling times by approximately ~5 hours weekly.
- Developed and implemented CI/CD pipelines utilizing Git Actions alongside Circle CI, which reduced deployment times by 40%, optimizing the workflow for model updates.
- Technologies Used: Python, Pyspark ML, FastApi, CI-CD, Mongo dB, Airflow as scheduler, AWS S3 Bucket, Artifact Registry, compute engine, Grafana, Prometheus, Loki.

Project - 2: Sensor Fault Detection.

- Designed and developed a machine learning project which to detect the sensor whether there is a fault or not in sensor.
- Developed a robust interface using FastAPI for machine learning model predictions, improving prediction response time by 40% and allowing users to receive analysis in real-time during test phases.
- Implemented CI/CD using git actions and deployed the web application on Amazon EC2 instances by using the Docker.
- Technologies Used: Python, Kafka, FastApi, ML algorithms, Docker, AWS S3, EC2, ECR, CI-CD.

Projects on GenAl

Project-1:Document Portal With Adv RAG.

- Implemented four services: Document Analysis for analyzing the documents, Document Compare for comparing two documents and Single-Multi Document Chat.
- Tools & Platforms: Python, LangChain, FastAPI, Streamlit, FAISS for vector search, Docker for containerization, CI/CD automation with GitHub Actions, and AWS services including ECR, Fargate, ECS, Secrets Manager, and CloudWatch for scalable deployment and monitoring.
- **GitHub repo**: https://github.com/AnuragreddyNaredla/document_portal_analysis_with_adv_RAG

Project 2: Multi-Agent System for Research Analysis and Automated Report Generation.

- Designed and implemented an AgenticFlow pipeline using Langgraph, enabling automated research, analytical reasoning, and response generation. Integrated a Human-in-the-Loop review mechanism to enhance model reliability, and generated final outputs as structured .docx and .pdf reports.
- Tools & Platforms: Python, LangGraph, LangChain, FastAPI, Jinja prompt templates, containerization with Docker, CI/CD pipelines using Jenkins, and Azure cloud services including ACR, Blob Storage, and Container Services, integrated with GitHub.

- **Github repo**: https://github.com/Anuragreddy-Naredla/automated-research-and-report-generation

Project 3: Serverless LLM Application with fine-tuning on AWS Sagemaker & Deployment using Lambda and APIGateway.

- Developed a serverless LLM application on AWS, implementing fine-tuning of foundation models using SageMaker and PEFT techniques (LoRA/QLORA). Built an end-to-end deployment pipeline using Lambda and API Gateway for scalable, low-latency inference.
- Tools & Platforms: Python, LangChain, S3, SageMaker, Lambda APIGateway, Dynamodb, CloudWatch.
- **Github repo**: https://github.com/Anuragreddy-Naredla/Finetuning-on-aws

SKILLS

- Python,Numpy,Pandas,Matplotlib,Seaborn
- Databases (Mongo DB, Cassandra)
- Vector Databases (Pinecone, Chroma db, FAISS, Astra db)
- Rest-API (FastApi, Flask, Streamlit)
- Statistics
- Machine Learning (scikit-leam, KNN, Linear Regression, Logistic Regression, Naïve Bayes, SVM's, DT, Ensemble models, PCA, unsupervised models
- Deep Learning (keras, Tensorflow, Pytorch, VGGNet's, Resnet's)
- Natural Language Processing (BOW, TF-IDF, Word2Vec, NLTK, Text blob, Spacy, Encoders and Decoders, Attention mechanism, Transformers, BERT, ELMO, GPT-1)
- Generative Al (Chat GPT, LLM's, Lang chain, Langsmit, Llama Index, Llama2, chain lit, Hugging Face, LORA, QLORA, prompt template, RAG, Groq, OpenAl, GPT, Agents, Tools)
- ML-Ops (Docker, Prometheus, Grafana, GitHub actions, Circle CI, MIflow, DVC, Dagshub, Airflow, Kubernetes, Ansible, Shellscripting)
- Deployment (AWS, EC2, ECR, S3, AZURE, AWS lambda, Amazon bedrock, Amazon API gateway, FARGATE, AWS Secret Manager, AWS Cloud Watch.)
- Big Data (Kafka)

EDUCATION

Bachelor of Technology in Information Technology 07/2015-05/2019, Hyderabad

Teegala Krishna Reddy Engineering College
Cumulative percentage - 65%
