Senior Software Engineer (SDE-2) | Frontend Developer

SUMMARY

Strategic **SDE-2** with 5+ years of expertise in driving frontend excellence using **Next.js, React.js, TypeScript, and CSS**. A Fintech specialist recognized for architecting digital lending journeys and high-traffic personal finance modules facilitating **10Cr+ monthly transactions**. Proven leader of engineering teams delivering 12+ enterprise features while maintaining **90+ Lighthouse scores** and 25% bounce rate reductions. An **AI integration pioneer**, experienced in bridging LLMs (Gemini, GPT) with production apps to cut operational overhead by 40%. With exposure to **Node.js, Java, and end-to-end SDLC**, he focuses on building scalable, **SOLID-based** architectures and real-time data streaming solutions.

TECHNICAL SKILLS

- **Languages**: JavaScript, TypeScript, HTML, CSS, Python
- **Frontend Stack**: Next.js, React.js, Redux Toolkit, React Query, Material UI, Tailwind CSS, Highcharts, AG Grid
- **AI/LLMs**: OpenAI (GPT-4.1, GPT-5.2), Claude (Opus, Sonnet), Gemini, prompt engineering, API integration
- **Agile & SDLC**: Agile/Scrum (2-week sprints, standups, retros), JIRA, Git (branching, PRs, code reviews), Confluence
- **Backend & Cloud**: Node.js, Firebase, Supabase, GCP, AWS, REST APIs, Webhooks
- **Testing & DevOps:** Unit Testing, CI/CD Pipelines
- **Tools**: VS Code, Figma, Bitbucket, macOS, Windows

CORE COMPETENCIES

- **Software Development Lifecycle**
- **Frontend Architecture**
- **AI/LLM API Integration**
- **UI/UX Implementation**
- **Performance Profiling & Optimization**
- **API Contract Design & Integration**
- **Unit Testing & Quality Assurance**
- **User- centric Design**
- **Agile & Scrum Methodologies**
- **Component – based Architecture**

PROFESSIONAL EXPERIENCE

Hindustan Times - Digital | SDE-2 *Gurugram, Haryana* ***Sep 2023 – Present***

- **Orchestrating** the development lifecycle for a team of 4 engineers, successfully shipping 12+ end-to-end features while maintaining strict **SOLID design principles**.
- **Engineering** a secure Digital Lending module; implemented **client-side decryption** for sensitive financial data received from the backend to ensure zero visibility in the network tab.
- **Standardizing** the UI/UX workflow by translating complex **Figma designs** into responsive, high-fidelity code components for mWeb and Desktop platforms.
- **Building and optimizing reusable UI modules** to ensure cross-browser compatibility, reduce redundancy, and accelerate feature rollout.
- Collaborating with **Product and QA Teams** to release reliable features with high performance and reduced UI defects.
- **Optimized** user engagement metrics for the Personal Finance module, facilitating **10Cr+ monthly transactions** by streamlining the frontend-to-disbursement pipeline.
- **Elevated** platform health by improving Core Web Vitals, achieving a **90+ Lighthouse score** and reducing user drop-off/bounce rates by 25%

Mesh (Workplace Intelligence) | SDE-1 *Gurugram, Haryana* ***Oct 2022 – Aug 2023***

- **Designed** and maintained a scalable, reusable component library, utilizing **DRY principles** to reduce cross-team development time by 30%.
- **Managed** high-stakes production stability as part of a 2-person elite on-call team, resolving **P1 critical bugs** within a 4-hour average window.
- **Implemented** unit testing suites and CI/CD pipeline checks to ensure code quality and reduce regression errors during rapid deployment cycles.
- **Contributed** to a **40% sales uplift** by refining the "Mesh Recommends" UI, focusing on Single Page Application (SPA) performance and user flow optimization.

Antino Labs (Fintech SaaS) | Frontend Developer *Gurugram, Haryana* ***Nov 2020 – Sep 2022***

- **Integrated** high-security Signzy KYC APIs (Aadhaar, GST, PAN), utilizing **data encryption** to safeguard user onboarding journeys and reducing manual reviews by 60%.
- **Transformed** legacy application performance, delivering an **85% speed improvement** via bundle analysis, memoization, and route-based lazy loading.
- **Collaborated** in 1-week high-velocity Agile sprints, defining API contracts and ensuring **cross-browser compatibility** across diverse user environments.
- **Developed** complex Fintech dashboards for **Safexpay**, focusing on real-time transaction monitoring and multi-currency payout management.

PROJECTS UNDERTAKEN

AI Fraud Detection Platform | Next.js, TypeScript, Gemini, Supabase

- **Architected** a real-time risk scoring engine using Google Gemini API, enabling auto-decisioning that cut operational manual reviews by 40%.
- **Developed** a live "Attack Radar" dashboard using Supabase Realtime to monitor velocity fraud and high-value clusters.

Livemint Personal Finance | Next.js, Highcharts, Material UI

- **Visualized** complex market data by designing a forecasting module with 5+ interactive chart types, driving higher user engagement through data storytelling.
- **Integrated** A/B testing frameworks to iterate on credit score tools and financial insights, aligning technical output with user behavior analytics.

Safexpay Payment Dashboard | Next.js, Redux Toolkit

- **Conceptualized** and built a multi-currency merchant dashboard from scratch, improving Lighthouse performance from a baseline of **35% to a peak of 80%**.

EDUCATION

- **B.Tech. in Computer Science & Engineering** | KIIT College of Engineering, Gurugram | 2016 – 2020
