PROJECTS

1. **Project: E-commerce Platform for Supplements and Medical Tests | Link:** https://hub.fxmed.co.nz

   Tech Stack: NextJs, ReactJs, Redux Toolkit, Tailwind, CSS, Laravel

   Description: An e-commerce platform built for healthcare, where practitioners can send product lists and place orders for supplements and medical tests for their patients and themselves. The platform includes product filtering, wishlist, and shopping cart features for a smooth user experience.

   Responsibilities:

- Implemented secure authentication and role-based access control for practitioners and patients.
- Built features to allow practitioners to place orders for themselves, on behalf of their patients.
- Developed modules for user login, wishlist, and shopping cart functionalities.
- Enhanced checkout flow and overall frontend performance.

2. **Project: Payroll Solution | Link:** https://admin.worklio.com

   Tech Stack: NextJs, ReactJs, Redux Toolkit, Tailwind, CSS, .NET

   Description: Worklio is a platform that helps companies manage employees, payroll, benefits, and HR tasks. It has a secure admin portal for handling employee data, running payroll, and generating reports.

   Responsibilities:

- Developed frontend modules such as employee on boarding, payroll dashboard, reports, and profile management.
- Connected frontend with backend APIs to show and update data in real time.
- Created reusable UI components (forms, tables, Buttons) for faster development.

3. **Project: Real Estate Listing Platform**

   Tech Stack: NextJs, ReactJs, Redux, WordPress, REST APIs, PHP, MySQL, ACF, Git

   Description: A real estate listing platform built using React and Next.js, designed to, showcase properties for sale and lease. Property data is fetched in real time via RESTAPIs. The platform helps generate client leads by displaying accurate, up-to-date property listings. The site supports real-time filtering by attributes like beds, baths, and price, enhancing the user search experience.

   Responsibilities:

- Developed responsive front-end interfaces based on design prototypes using React.js, Next.js
- Implemented dynamic content management using headless WordPress and ACF FlexibleContent
- Integrated RESTAPIs to display live property listings
- Built property filtering functionality based on price, location, type, and other key attributes

4. **Project: Payroll Solutions Company Website | Link:** www.worklio.com

   Tech Stack: WordPress, REST API, PHP, MySQL, Gutenberg, HTML, CSS, JS, AJax, Hubspot, Git

   Description: A corporate website built for a company that offers payroll and workforce management solutions. The site was developed using WordPress with custom Gutenberg blocks for flexible content management. It includes HubSpot integration to handle lead generation through custom forms and API-based submissions.

   Responsibilities:

- Developed custom Gutenberg blocks to allow dynamic content editing within the WordPress editor.
- Integrated third-party REST APIs to submit form data directly to HubSpot for CRM and lead tracking.
- Improved website performance by optimizing frontend code, increasing **mobile speed score from 40 to 70, desktop score 80 to 90** and enhancing Core Web Vitals.
