Jeroni Faith

Software Engineer

+91 6382078248 | jeronij10@gmail.com | Linkedin | GitHub | Chennai

Software Engineer with 3+ years of experience owning the development of scalable web applications. Proven ability to deliver production-ready features end-to-end, improve performance and reliability, and make sound engineering trade-offs. Writes clean, maintainable code and collaborates closely with cross-functional teams to ship high-quality, user-focused products.

TECHNICAL SKILLS

Languages and Frameworks: JavaScript, HTML/CSS, React, Next.js, Node.js, REST, GraphQL, Styled Components, Typescript, MySQL, Express
Versioning Tools: Git, GitHub
Libraries: Apollo Client, Apollo Server, Prisma ORM, Zustand, SWR
Miscellaneous: SSR, SPA, Session Management, API Caching, Optimization Techniques, Sensitive Data Handling

EXPERIENCE

Jan 2023 - Present

CIMET *Remote*

- **Developed and owned high-traffic B2B and B2C web applications** used by hundreds of thousands of users across multiple comparison verticals (credit cards, energy, mobile, broadband), ensuring **scalability, reliability, and performance**.
- **Led frontend and backend development** for complex product features using **React, Next.js, Express.js, MySQL**, delivering end-to-end functionality from requirements to production.
- **Revamped the Energy plans page**, a performance-critical and data-heavy surface, optimizing rendering, data loading, and filtering logic to significantly improve **page load times, user experience, and system efficiency**.
- **Designed and implemented the core architecture for a new "Bundle" vertical**, unifying plans and filters across three verticals into a single scalable system; delivered under strict deadlines.
- **Centralized caching architecture using Redis** for third-party and internal APIs, reducing usage of a high-traffic Address API by **~60%**, lowering infrastructure cost, and improving **latency by 150%+ (staging) and 50%+ (production)**.
- **Built and integrated RESTful APIs and GraphQL APIs**, enabling efficient data exchange between frontend, backend services, and internal tools.
- **Executed production-grade data migration**, encrypting and migrating **20GB+** of live log data with resumable processing, streaming metrics, validation checks, and a custom **data comparison API** to ensure integrity.
- **Improved SEO and application performance** through **server-side rendering (SSR)** and optimization techniques in **Next.js**, supporting higher engagement and faster initial load times.
- **Implemented security best practices**, including data encryption and access controls, to protect sensitive information and meet compliance requirements.
- **Worked in an Agile/Scrum environment**, participating in sprint planning, backlog grooming, code reviews, and on-time delivery of features.
- **Led large-scale refactoring initiatives** to improve code maintainability, reduce technical debt, and standardize patterns across multiple verticals and shared components.
- **Built internal tools and dashboards for quality and sales analysis**, enabling teams to analyze user behavior and sales data more efficiently and improve operational decision-making.
- **Actively contributed to code quality and system reliability** through thoughtful code reviews, reusable component design, and proactive identification of performance and scalability bottlenecks.

Technologies Used: React, Next.js, JavaScript, Express.js, MySQL, Redis, REST APIs, GraphQL, Server-Side Rendering

EDUCATION

Bachelor of Engineering in Computer Science and Engineering | *May 2022*

Saveetha Engineering College | Chennai

PROJECTS

WORK-PLACE

- Developed a web application using React and Firebase that connects employers and job seekers, facilitating job postings, applications, and communication.
- Implemented route restrictions to ensure secure and personalized access based on user type
- Enabled employers to post job listings with specific requirements, while allowing employees to search and apply for relevant positions
