Education

Degree	Institute/Board	CGPA/Percentage	Year
B-Tech	SRM Institute Of Science And Technology	9.12	2020-2024

Experience

- **RiskOps AI** *January 2025 - December 2025*
  Software Engineer
  Cyber Risk Reduction
  - Applied cyber risk reduction strategies by integrating security processes and technologies to lower the likelihood and impact of threats.
  - Built interactive dashboards with D3.js to visualize risk exposure, remediation cost, and regional insights for stakeholders.
  - Engineered real-time data streaming via Server-Sent Events (SSE), enabling continuous backend-to-dashboard updates without manual refresh.

  DORA

  - Implemented DORA-compliant cyber resilience practices by visualizing ICT risks, incident trends, and third-party dependencies through interactive D3.js charts.
  - Designed a master data screen enabling stakeholders to analyze cyber and physical risk information in a structured tabular format for deeper insights.
  - Enhanced organizational resilience by integrating real-time reporting, system testing, and collaborative risk intelligence sharing into financial risk management workflows.
- **RiskOps AI** *January 2024 - December 2024*
  Frontend Developer Intern
  Risk Metaverse
  - Designed and developed an interactive web-based platform to visualize cyber and physical risk data globally using 2D maps and a 3D globe with Three.js.
  - Implemented region-wise risk dashboards displaying data in structured tables with key metrics such as risk exposure values and remediation costs.
  - Optimized 3D rendering and data integration to handle large-scale datasets efficiently, improving performance and user engagement.

Projects

- **Scratch**
  - Developed a Scratch-like visual programming application using React, JavaScript (ES6+), and Tailwind CSS, implementing drag-and-drop UI, reusable components, and responsive design.
  - Implemented multi-sprite animation system with independent script execution, parallel processing, and collision detection logic, enabling real-time interactive behavior.
  - Designed and deployed a state-driven animation engine with editable programming blocks, event handling, and Vercel deployment, ensuring performance optimization and clean UI/UX.
- **Paramov**
  - IOT-based system for monitoring paralysis patients, which uses sensor data to track patient movements.
  - Implemented a cloud-based infrastructure to process sensor data and send real-time notifications to a mobile application, ensuring timely alerts and enhanced patient care.
  - Designed the application using Flutter for a seamless user experience, and programmed the sensor interface with Arduino IDE for reliable data acquisition and processing.

Technical Skills

- **Programming**: Data Structures and Algorithms in C++ | Object Oriented Programming (OOPS) in C++
- **Programming Languages**: C/C++ | HTML | CSS | Python* | Java* | SQL
- **Others**: Web Development | Angular | React | Next JS | Typescript | Javascript | Flutter(Dart) | Database Management System | Salesforce | Internet of Things |Arduino | Firebase | Git | Jira | Bitbucket ** Elementary Proficiency*

Certifications

- : Database Foundations(Oracle Academy)
- : AWS Academy Cloud Foundations (AWS)
- : Data Structures (Coursera)

Achievements

- **AQUATRAIL**, Published the paper in IEEE
