SUMMARY

Frontend Developer with 3 years of experience building **fast**, **reliable**, and **user-focused React** applications. Skilled in creating **clean, responsive designs**, optimizing **complex data views**, asynchronous data handling, and integrating smoothly with **RESTful APIs**. Strong collaborator with **UX**, **backend**, and **product** teams, with a solid grasp of **cross-browser compatibility**, **web standards**, and **Agile/Scrum** methodologies.

EXPERIENCE

Software Engineer, Impelsys — October 2022 – Present

- Developed an encrypted invoice application that **automated monthly billing for 10+ projects**, eliminating manual Excel processes and **reducing processing time by 80%** using React, TypeScript, Node.js and MySQL.
- Engineered a **centralized dashboard** for tracking employee and project data integrating **REST APIs, reducing employee utilization by 50%** using Redux, and optimizing performance using lazy loading,code splitting and reducing unnecessary rerenders.
- Collaborated on the Careplans application **used by 100+ doctors** to create tailored treatment plans for lifestyle diseases, **improving patient onboarding by 40%** using React.js.
- Designed a **Project Health Report tool** with **JIRA API integration**, enabling rapid evaluation of Project Health for 10+ projects, **enabling 60% faster risk identification** using React.js and Node.
- Revamped legacy UI components to modular, reusable React components improving maintainability and **reducing load times across 1,000+ pages**. Created technical documentation for reusable UI components.

Research and Development Intern, National Informatics Center, Kochi — August 2022 – October 2022

- Contributed to research and architectural planning for migrating a legacy monolithic MERN application to a scalable **microservices-based system** .
- Designed and developed a microservice project as a **proof-of-concept** to demonstrate the feasibility of the project.
- Implemented **Kafka** for reliable message passing between microservices, ensuring **data consistency** and **improving system fault tolerance**.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, Python
Frameworks Libraries: React, Svelte, Redux, Context API, Node.js, Next.js, SCSS/SASS, Tailwind CSS, Material-UI
Tools: Babel, RESTful APIs, Jest, Webpack, NPM, GraphQL, OAuth2, JSON
Platforms: Jira, Postman, Git, Firebase, Figma
Soft Skills: Continuous learning,Detail Oriented, Communication, Mentorship, Accessibility, Data Structures, Testing.

PROJECTS

NETFLIX-GPT — GitHub Repo

- Developed a Netflix application using **React Js, Redux, and Firebase, integrating GPT-3** for AI driven recommendations and movie listing from TMDB API
- Implemented secure authentication with **Firebase and used Redux** for efficient state management, displaying personalized movie descriptions based on **GPT-3 input**.

CRYPTO APP — GitHub Repo

- Developed a cryptocurrency dashboard app integrating real-time crypto currency data, market exchanges, and global crypto news using **Rapid API**.
- Built intuitive and responsive user interfaces using **Ant Design** and implemented **Redux** for efficient state management.

EDUCATION

School of Engineering, CUSAT — July 2018 – June 2022
Bachelor's in Computer Science/Engineering — CGPA: **8.6**
