VIGNESHKUMAR P

SOFTWARE TEST ENGINEER

88076 97714 | pvigneshkumar16@gmail.com | Chennai

About me

Proficient in risk management techniques, I identify potential risks and devise mitigation strategies to minimize the impact on project deliverables and A staunch advocate for quality, I champion best practices and methodologies to embed quality throughout the software development lifecycle.

Education

BSC | Chemistry

The American College, Madurai

2015 - 2018

Skills

- Java Selenium
- TestNG
- BDD Cucumber
- Postman
- Rest Assured
- Jenkins
- Appium
- JIRA
- Maven
- SQL
- Android Studio
- GIt
- Manual Testing

Experience

Altisource Business Solutions Pvt Ltd	**March 2025 - Present**
Galaxy Weblinks	**Dec 2022 - Dec 2024**
Cadential Technologies	**Dec 2021 - Dec 2022**
Solartis Technology Services Pvt Ltd	**June 2021 - Nov 2021**

Around 5 years of well Experience in Software Testing using Maven, Jira, Jenkins, Git, SQL, Postman, Rest Assured, BDD Cucumber, TestNG, Appium with API Testing, Mobile Testing, UI testing and Database Testing and Equipped with strong problem-solving abilities, I tackle testing challenges with determination and efficiency

PROFESSIONAL SUMMARY

- QA Tester with solid experience in manual and automated testing of web, mobile, and API applications Involved in complete Software Testing Life Cycle (STLC) including requirement analysis, test planning, test case design, execution, and defect reporting. Designed,
- developed, and maintained robust automation frameworks using Java, Selenium, TestNG, Maven, and Page Object Model (POM).
- Created and executed BDD Cucumber feature files, step definitions, and test runners to improve test readability and collaboration with stakeholders. Performed manual testing for functional, regression,
- smoke, sanity, and exploratory test scenarios. Automated REST API test cases using Rest Assured and validated responses, headers, and
- JSON schemas. Used Postman for API testing, collections, environments, and automated API test execution. Integrated
- automation test suites with Jenkins CI/CD pipelines for scheduled and trigger-based executions. Performed database testing by writing
- SQL queries to validate backend data integrity. Logged, tracked, and closed defects using JIRA, ensuring proper defect lifecycle
- management. Committed to delivering high-quality, user friendly, and reliable software solutions through continuous improvement.

Project I - Kitchenwarehouse

Domain - Ecommerce
March 2025 - Present

Kitchenwarehouse.com.au is an Australian online kitchenware retailer that sells kitchenware, cookware, knives, bakeware, drinkware, and more. They offer a wide range of products for cooking, baking, food storage, and kitchen organization, catering to both home cooks and professional chefs.

Skills

- Java Selenium
- Maven
- Git
- Rest Assured
- Appium
- BDD Cucumber

ROLES AND RESPONSIBILITIES

- Analyzed business requirements and prepared detailed test scenarios, test cases, and test data for web and mobile applications. Developed
- and maintained automation test scripts using Java, Selenium WebDriver, and BDD Cucumber following the Page Object Model (POM) design pattern. Managed project dependencies and build execution using
- Maven.
- Performed API testing using Rest Assured, validating request/response, status codes, and schema.
- Executed cross-browser testing to ensure compatibility across Chrome, Firefox, and Edge.
- Automated mobile application testing using Appium for Android/iOS platforms.
- Integrated automation scripts with Git for version control and collaborative development.
- Created reusable step definitions, feature files, and hooks for efficient BDD implementation.
- Identified, logged, and tracked defects using defect management tools and worked closely with developers for resolution.
- Performed smoke, regression, and sanity testing during different testing cycles.
- Participated in Agile ceremonies such as sprint planning, daily stand-ups, and retrospectives.

Project II -BANK OCHRONY SRODOWISKA

Domain - Banking
Dec 2022 - Dec 2024

BOS offers a range of banking products and services, including loans, leasing, factoring, and financing solutions tailored to environmentally friendly projects and businesses. The bank works closely with government agencies, environmental organizations, and businesses to promote eco friendly practices and investments.

Skills

- Java Selenium
- TestNG
- Manual Testing
- SQL
- Postman

ROLES AND RESPONSIBILITIES

- Analyzed business requirements, functional specifications, and user stories related to banking products such as loans, leasing, and financing services.
- Designed and developed automation test scripts using Java, Selenium WebDriver, and TestNG following the Page Object Model (POM) framework.
- Performed manual testing (functional, regression, smoke, and sanity testing) to validate application workflows and ensure quality releases.
- Executed API testing using Postman to validate request/response, status codes, authentication, and data integrity for banking services.
- Prepared and executed SQL queries to validate backend database transactions, customer data, and financial records.
- Identified, logged, and tracked defects using defect management tools and collaborated with developers for timely resolution.
- Participated in daily stand-up meetings, sprint planning, and review discussions in an Agile environment.
- Maintained automation suites, generated test execution reports, and shared status updates with stakeholders.
- Ensured compliance with banking domain standards, security validations, and data accuracy during testing.
- Supported production deployments and performed post-release validation (smoke testing) to ensure system stability.
- ntegrated automated test scripts with TestNG for batch execution, grouping, and parallel testing.
- Performed cross-browser testing to ensure application compatibility across different browsers and devices.
- Validated end-to-end workflows such as customer onboarding, loan application processing, payment transactions, and account management.

Project III-Lorna Jane

Domain - Ecommerce

Dec 2021 - Dec 2022

Lorna Jane is a women's activewear brand that sells a variety of garments, including tops, shorts, pants, jackets, hoodies, shoes, and accessories. Their products are designed with both style and functionality in mind, catering to active lifestyles. On their website, customers can explore their latest collections, shop for activewear and accessories, find fitness inspiration, and learn more about the brand's ethos and values.

Skills

- Java Selenium
- BDD Cucumber
- Postman
- Rest Assured

ROLES AND RESPONSIBILITIES

- Analyzed business requirements and prepared test scenarios, test cases, and test data for the activewear e-commerce platform.
- Developed and maintained automation scripts using Java, Selenium WebDriver, and BDD Cucumber following the Page Object Model (POM) design pattern.
- Created feature files, step definitions, and hooks to support behavior-driven testing and improve collaboration with stakeholders.
- Performed API testing using Postman and Rest Assured, validating request/response payloads, status codes, authentication, and schema.
- Automated end-to-end user journeys such as product search, add to cart, checkout, payment, and order confirmation.
- Conducted cross-browser and responsive testing to ensure compatibility across multiple browsers and devices.
- Identified, logged, and tracked defects, and collaborated with developers for quick resolution.
- Performed smoke, regression, and sanity testing during sprint cycles and releases.
- Participated in Agile ceremonies including sprint planning, daily stand-ups, and retrospectives.
- Generated automation reports and shared test execution status with stakeholders.
- Supported production deployment validation and post-release testing activities.

Project IV -Guardian Life Insurance

Domain - Insurance

June 2021 - Nov 2021

Guardian Life Insurance Company of America is a U.S.-based insurer providing life, disability, dental, and employee benefit insurance solutions through secure digital platforms

Skills

- Java Selenium
- TestNG
- Manual Testing
- SQL
- Jira
- Postman

ROLES AND RESPONSIBILITIES

- Analyzed business requirements and functional specifications related to insurance and employee benefits platforms.
- Prepared detailed test scenarios, test cases, and test data based on user stories and acceptance criteria.
- Performed manual testing including functional, regression, smoke, and integration testing of web applications.
- Developed and executed automation test scripts using Java, Selenium WebDriver, and TestNG framework.
- Designed reusable automation components using Page Object Model (POM) for better maintainability.
- Conducted API testing using Postman, validating request/response payloads, status codes, and authentication mechanisms.
- Performed database validation using SQL queries to ensure backend data integrity and accuracy.
- Identified, logged, and tracked defects using Jira, and worked closely with development teams for resolution.
- Executed cross-browser testing to ensure compatibility across multiple browsers and environments.
- Participated in Agile/Scrum ceremonies such as sprint planning, daily stand-ups, backlog grooming, and retrospectives.
- Generated test execution reports and shared test status updates with stakeholders.
- Supported UAT testing and production release validation activities.
- Ensured compliance with insurance domain regulations and data security standards during testing.
