5+ years of hands-on experience in designing and executing automation strategies across complex systems. Adept at building and maintaining scalable test automation frameworks for UI and API validation using Java, Selenium, Rest Assured, and TestNG. Strong grasp of Agile practices, CI/CD pipelines, microservices testing, and defect lifecycle management. Proven expertise across Fintech, Telecom, and Payments domains with measurable improvements in test coverage, release cycles, and system reliability.

Airtel Payments Bank, Gurgaon

SDET-2 **Oct'2022 – Present**

- Working in Agile environment with frequently changing requirements.
- Working with Payments Team under Mitra App products.
- Handling on-call activities, resolving version sets and pipeline block issues.
- Reviewing test plans and test cases for multiple features.
- Developed and maintained automated test scripts for functional, regression, and integration testing using Java and Selenium WebDriver.
- Performed API testing using Rest Assured and Java for end-to-end validation of web services.
- Led transition of manual test cases to automation, reducing manual execution effort by 50%.
- Migrated ~75% UI and backend test cases from manual to automation.
- Created custom test reports and integrated them with Jenkins for real- time execution visibility.
- Executed Functional and Regression suites across DEV and QA cycles.
- Maintained code versions using Git commands.

Healthians, Gurgaon

Quality Engineer (Automation) **Aug'2021 – Oct'2022**

- Worked as an SDET on Healthians Web Application and Mobile App, ensuring quality across UI and backend layers.
- Designed and developed Automation Framework using Selenium WebDriver + Java + TestNG following Page Object Model (POM).
- Automated critical user journeys such as login, test booking, cart flow, payment integration, report download, and profile management.
- Performed API automation using REST Assured and validated response status codes, headers, schema, and database consistency.
- Conducted cross-browser testing for Web (Chrome, Firefox) and validated responsive UI behavior.
- Executed Mobile App testing (Android) and validated app flows, deep links, and API integration.
- Integrated automation suite with Jenkins for CI/CD pipeline execution and scheduled nightly regression runs.

SKILLS

Core Java

Selenium WebDriver

TestNG

Page Object Model (POM)

Data Driven Framework

Postman / Newman

Rest Assured

Maven

Git / GitHub

Jenkins

SQL

Agile / Scrum

SDLC / STLC

Jira

Cucumber BDD

JMeter

Linux Commands

GenAI

Prompt Engineering

CERTIFICATION

Manual & Selenium WebDriver Training – Ducat, Gurugram (2019)

- Converted high-priority manual test cases into automation, reducing regression effort significantly.
- Performed Database validation using MySQL queries to ensure correct data mapping between frontend and backend.

Paisabazaar Pvt. Ltd, Gurgaon

Quality Analyst **Nov'2019 – Aug'2021**

- Executed Functional, Regression, and Smoke testing for FinTech applications.
- Designed detailed test cases and managed complete defect lifecycle activities using JIRA.
- Participated in Sprint planning, Sprint reviews, and defect triage meetings.
- Worked in the Quality team and was actively involved in complete Software Development Life Cycle (SDLC) and Software Testing Life Cycle (STLC).
- Prepared Test Strategy, performed impact analysis, and provided accurate Test Estimates for new features and change requests.
- Performed Database testing to validate data integrity and ensure correct data storage in backend systems.
- Conducted API testing using Postman and validated request/response, status codes, and data accuracy.
