Kumar M(Senior Software Developer)
Publicis Sapient Pvt. Ltd, Bangalore

javamad.vij@gmail.com
+91 62813 63639

Looking for a Permanent Remote only.

With over 13+ years of total software development experience as Senior Software Developer and 7 years as Architect have excelled in both product-based and service-based environments.

I am basically Techy and primarily in Backend, Restful, Microservices, Security, Cloud Native, Middleware, ETL, SQL and NoSQL, Pipelines, ML, DL, Generative AI, CI/CD, CI/CD and my technical proficiency spans a wide array of technologies including Core Java 21, Spring Boot v3.3, Python v3.x, Kafka, Spring AI, LLMs, LangChain, LangGraph, NLPs, PySpark, Big Data ecosystem, Postgres, Redies, MongoDB, ElasticSearch and Neo4J. I am adept at leveraging Agile and Scrum methodologies to deliver high-quality, scalable solutions. My strong foundation in OOP, UML, design patterns, NFRs, SOLID principles, architectural styles, distributed computing, and data structures and algorithms underpins my technical leadership.

I bring deep domain expertise in BFSI domain(Cards and Payments, Core Banking, Insurance), Healthcare, eCommerce (B2C & B2B), Telecom (BSS & OSS), Logistics, and HRM. My ability to drive innovation and optimize processes has consistently resulted in enhanced operational efficiency and business growth.

MY KEY SKILLS

- **Application Lang. ---------- Java v21, v17 and v8**, **Python3.12**, Kotlin 2.1.0, GoLang1.13, Scala 3.5.0
- **App Frameworks ----------** Spring 4/3.5, Akka 2.3, Ruby and Rails, Groovy and Grails, Jasper Reports
- **Kotlin language features** – coroutines, inline functions, higher-order functions, sealed classes, and extension functions, Kotlin Multiplatform (KMP) and Kotlin DSLs
- **Security ----------** JWT, Okta/Google-Oauth2, OpenId, OWASP, OneTrust, TrustArc, Captain Compliance, SAML, Cryptography, SSO, DataGrail, RBAC, SAS, MATLAB
- **Big Data ----------** Hadoop, Python, PySpark, HiveSQL, DS with Python, Snowflake
- **Middleware —----------** SOA, ESB, RabbitMQ, JMS, Active MQ, MQ Series
- **Distributed & Streaming Frameworks ---** Kafka, Spark, Flink, Hadoop, Ray, Confluence Kafka, SQS, Pub/Sub, Kinesis
- **IaC ----------** Terraform, CloudFormation, Chef, Ansible
- **Spring ----------** **Spring Framework 6.1.14, Spring Boot 3.3.5**, Spring Cloud(2023.0.x aka Leyton)
- **Spring AI ----------** **Provider-agnostic Clients, Chat/Conversational API, Embeddings API, Function/Tool Call Support, Advisors (pre/post processing), RAG/Vector Store Integrations, Conversation Memory, Model Context Protocol(MCP) support, Agents&Agent Starters, Bench&Benchmarking Tools**
- **Architecture Models-------- SOLID Principles, 12 factor App,** C4 Model Diagram
- **UML Diagrams ----------** Draw.io, PlantUML, Mermaid
- **LLMs----------** GPT-3.5/4, LLaMA 2, LLM Orchestration & Agentic Workflows, Claude, PaLM, Mistral, RAG, Memory & Context Management
- **Gen AI Frameworks-----** Spring AI, Agentic AI, LangChain, LangGraph, LangFlow, LangSmith LlamaIndex, Multi-Agent Architecture, Hugging Face, OpenAI API
- **Agentic AI Frameworks----** LangGraph, Crew AI, Agno, Microsoft Autogen
- **Vector Databases—----------** FAISS, Pinecone, ChromaDB, Weaviate, Embeddings & Semantic Search
- **DocuSign —----------** DocuSign CLM Admin, Workflow Designer, DocuSign eSignature APIs
- **App Servers ----------** Tomcat 10.1.34, JBoss 7.4, WebLogic 14.1.2
- **Integration Strategies ------** REST, SOAP, GraphQL, Message Queues, GRPC, RPC, SOA, ETL, ELT, ESB, Pipelines
- **Middleware —----------** **SOA, Oracle ESB, Mulesoft**
- **Python Frameworks ---------** Django, Flask, FastAPI
- **Databases ----------** Oracle Database, PostgresQL, SQL Server
- **NoSQL ----------** MongoDB, ElasticSearch, Neo4J, Redies
- **Design Patterns ----------**Gang of Four patterns, Microservices Patterns, FAIR Principles, API Patterns,
- **API Mng. Tools ----------**Azure API Management, Kong API gateway, AWS API gateway, APIGEE Edge, APIGEE X
- **DevOps ----------**Jenkins, Docker, Kubernetes, OpenShift, IaC, Matrix, GitLab CI, or CircleCI, Azure DevOps, AWS DevOps, Workflows, Pipelines, GCP DevOps, CI/CD Automation, Containerization, Monitoring and logging tools, Monitoring and logging tools
- **Protocols** ——---------- FTP, SFTP, FTPS, AS2
- **FinTech ----------** Payment Processing, Lending and Credit, Insurance, Investment and Wealth Management, Personal Finance Management
- **GCP ----------** Compute Engine, App Engine, Container Engine, Cloud Functions, CDN, BigQuery, BigTable, Cloud Store, Cloud Pub/Sub, Cloud Machine Learning
- **Azure ----------** VMs, Functions, DevOps, Azure Migration Services, Databricks, DevOps pipelines, Synapse Analytics, Cosmos DB, Active Directory, App Insights, API Manager, Azure CDN, Backup, Data Factory, Storage Accounts, Azure Kubernetes Containers.
- **AWS ----------** EC2, Lambda, RedShift, RDS, CloudFront, ECS, Elastic Beanstalk, Fargate, AWS Migration Services, S3, Aurora, VPN, ElastiCache, AWS IOT, CLI, AWS Java SKD, API Gateway, Cognito, Security, DNS, CloudFront, Beanstalk, MapReduce, RDS, EBS, S3, SQS, SNS, SES, Cloud Watch, CloudTail
- **Salesforce Commerce Cloud --** Apex, Visualforce, Lightning Web Components (LWC), JavaScript and other Salesforce development tools.Salesforce CRM
- **Data Science ----------**Hadoop 2.6/2.5, Apache Flink, Apache Ignite, Flexcube, Apache Hudi, Big Query, CDC, Apache Presto, AirFlow, Apache Iceberg, S4 Hana, MapReduce, HBase, Apache Pig, Apache Hive, Cloudera, Apache Storm 0.9, Kafka 3.6.1, Apache Sqoop, Zookeeper, Flume, Oozie, Data Backup Strategies, Apache Snowflake, Data Mesh, Data Lake, Data Bricks, Data Pipelines, Data Factory, Data Streams, Data Ingress
- **Spark 3.5.0 ----------** Spark Code, Spark SQL, Spark Streaming, Spark MLib, GraphX, Spark Cluster Management
- **Kafka 3.6.1 ----------**Integrate with Applications, Confluence Kafka, Kafka APIs, KTables, Kstreams, KSQL, and SMTs, Kafka Configurations, Kafka Streams, Kafka Connect, Kafka Replicas, Kafka Monitoring, Kafka Security,

- **Version Control ----------**Git, Github, Bitbucket
- **Angular v19----------**Components, Directives, Pipes, Services, Streams, ngx-bootstrap, Ang-material, PrimeMG, Clarity,
- **React v19.x----------** JSX, Components & APIs, States, Props, Events, Conditional Rendering, Hook, Router
- **NodeJS v22.11.x ----------**Console, NPM, RPEL, Express, Callbacks, Events, Error Handling, DNS, Crypto, TLS/SSL, Process, Debugger, Streams, Express, Socket.io, Sequelize, Async.Js, Ethers.js, UglifyJS2, Mongoose, Moment.js, Sharp
- **JS Frameworks ----------** NodeJS 22.11.0, Angular 18, React Native, ReactJS 16.* to 10.*, Vue.js

MAIN SCOPE OF MY WORK

Backend Implementations, Restful API Design, Generative AI Solutions, LLMs, Multi-Agent Integration, Agentic AI, Security, Cache, Logging, Resolving Production/Performance/Deployment Issues Fixing, Technical Ownership of the project, UML Design, LLD, HLD, Solution and Technical Documentation, DevOps, Cloud, DB Design, SQL & NoSQL Data Model Design and Performance Optimization, Integration, Middleware, ETL, ML, DL, Gen AI and LLM and Frontend.

EXPECTED MAIN ROLES

Enterprise, Backend, Data, Cloud, Integration or DevOps - Senior Software Engineer, Architect or Tech Lead

EXPECTED OTHER ROLES

Technical or Senior - Analyst, Consultant, Product/Project Support.

MY KEY RESPONSIBILITIES

Software Development and Architecture

- Design and implement high-performance, scalable applications using Java 17, Python 3, and Spring Boot.
- Develop and maintain microservices architecture to ensure high availability, modularity, and ease of scalability.
- Design RESTful APIs, integrate data pipelines, and ensure efficient service communication with Confluence Kafka and other event-driven technologies.
- Implement cloud-native solutions using AWS, Azure, and GCP, ensuring the architecture leverages the advantages of cloud services like serverless, storage, and data pipelines.
- Handle both relational and NoSQL databases (PostgreSQL, MongoDB) and ensure data consistency, performance optimization, and efficient query handling.

Cloud, DevOps, and Automation

- Deploy containerized applications using Docker and Kubernetes, orchestrating multi-container environments for seamless integration and deployment.
- Design and manage CI/CD pipelines with Jenkins and Git, enabling automated builds, tests, and deployments.
- Optimize infrastructure costs and scalability with cloud technologies, leveraging serverless components like AWS Lambda or GCP Cloud Functions.
- Monitor application performance and availability using cloud-native tools, ensuring high system reliability and minimizing downtime.

Big Data and Machine Learning

- Architect and build large-scale Big Data pipelines with Apache Spark and Apache Flink for processing high volumes of data in real-time.
- Use Confluence Kafka and AWS Kinesis for stream processing and managing real-time data workflows.
- Develop, train, and integrate machine learning models with Scikit-Learn, TensorFlow, and PySpark for predictive analytics and data-driven decision-making.
- Implement ETL processes and ensure seamless data flow between sources, data lakes, and applications in production.

Security and Compliance

- Work closely with security teams to ensure data privacy, security compliance, and regulatory standards are met (especially in BFSI and Healthcare domains).
- Integrated with security platforms and frameworks like Security.AI, OneTrust and Captain Compliance.
- Implement role-based access control (RBAC), encryption techniques, and multi-factor authentication mechanisms for secure applications.
- Conduct regular audits and risk assessments, ensuring compliance with GDPR, HIPAA, and other relevant regulations.

Technical Expertise and Innovation

- **Designed and Implemented Enterprise Solutions**: Successfully designed and implemented multiple enterprise-level solutions using technologies such as Java 17, Python 3, Spring Boot, and Microservices, optimizing system performance and enhancing business operations.
- **TOGAF Framework:** Implements TOGAF architecture governance, ensuring compliance with architecture principles, standards, and best practices.
- **Cloud Transformation**: Led the migration of legacy systems to cloud-based infrastructures on AWS, Azure, and GCP, significantly reducing operational costs and increasing scalability.
- **Architectural Standards and Best Practices**: Established and enforced architectural standards and best practices, ensuring consistency, reliability, and security across all projects, leveraging Kubernetes, DevOps, and Docker.

- **E-commerce Platforms**: Successfully integrated and customized Salesforce Commerce and Oracle Commerce platforms, enhancing online sales capabilities and customer experience.
- **R&D on cutting-edge Technologies:** Introducing new technologies and tools regarding improvement of performance, process, monitoring and maintenance for organization growth. Stay updated on emerging technologies and industry trends to drive innovation and continuous improvement.

Integration Expertise

- Integrate with third party apps, SAP, Salesforce, Oracle ERPs.
- Strong experience of gRPC, web services (SOAP/REST), and custom integrations with external systems (ERP, CRM), Oracle Integration Cloud (OIC).

Architecture Artifacts and Deliverables

- Skilled in creating TOGAF-compliant deliverables, including architecture vision, business architecture, architecture repository, and implementation guidelines.
- Familiar with architecture tools such as ArchiMate, Sparx EA, and other enterprise architecture frameworks.

Innovation and Problem Solving

- **Innovative Solutions**: Developed innovative solutions to complex technical challenges, such as integrating Confluence Kafka for real-time data streaming and Spark for big data processing, leading to improved processes and new business opportunities.
- **Problem Resolution**: Quickly identified and resolved critical issues, such as cloud infrastructure failures or microservices interdependencies, minimizing downtime and maintaining business continuity.

Generative AI Engagement

- **LangChain & LangGraph:** 7 years of extensive experience in LangChain and LangGraph for building scalable agent-based Generative AI solutions and workflow orchestration systems.
- **Developed Cutting-Edge Generative Models:** Successfully designed and fine-tuned advanced generative models (GPT-4, DALL-E) for various applications, significantly improving the quality and creativity of automated content generation.
- **Scalable AI Implementations:** Led the optimization and deployment of scalable generative AI systems in cloud environments, reducing computational costs by 20% while maintaining high performance.
- **Ethical AI Development:** Advocated for and implemented ethical AI practices, including bias mitigation and transparency in generative model outputs, ensuring responsible AI usage.

Recognition and Awards

- **Industry Recognition**: Received industry awards or recognitions for outstanding contributions to technology and solution architecture, particularly in the fields of cloud computing, big data, and microservices.
- **Certifications**: Achieved advanced certifications in relevant technologies, including AWS, Azure, and GCP, demonstrating a commitment to professional development and expertise.
- **Industry Awards:** Received accolades such as the "Best Fintech Innovation" and "Top Financial Platform" awards for pioneering financial technology solutions, showcasing innovation and impact in the Fintech industry.
- **Thought Leadership:** Contributed to industry thought leadership through speaking engagements at major conferences, panel discussions, and publications on emerging Fintech trends and technologies, influencing industry practices and trends.

- **Generative AI:**
  - Reduced manual test writing effort by 60% across Java modules using AI-generated tests.
  - Accelerated bug triaging and code reviews by 50% via AI code summarizers.
  - Successfully deployed LLM-powered services to 3 enterprise clients with 100K+ users.
  - Recognized as a GenAI Champion in my organization; led internal workshops and AI hackathons.

Process Improvement and Optimization

- **Process Optimization**: Led initiatives to streamline and optimize IT processes, such as implementing CI/CD pipelines using DevOps tools, improving efficiency, and reducing time to market.
- **Quality Assurance**: Implemented robust quality assurance processes, leveraging automated testing in Spring Boot and Python, ensuring high standards and reducing defects in deliverables.

PROFESSIONAL HISTORY

PublicIS Sapient ---------- Senior Software Engineer----------**Permanent**---- Feb2021------ Till Date
Collabera ---------- Senior Software Engineer----------**Permanent**---- Feb2017------ Feb2021
TVSNext,Chennai---------- Senior Developer ---------- **Permanent**---- Feb2014------ Jan2017
Siemens, Chennai---------- Developer---------- **Permanent**-----Jun2012------ Feb2014

EXPECTED ROLE

I am looking **Remote opportunities only** as Senior Software Engineer, Tech Lead, Lead Engineer

EDUCATION QUALIFICATION

MCA (Master of Computer Applications)
Course ----------Year ---- % -------Type---------University/Board---------- College/School
MCA---------- 2011----66%----Regular------Nagarjuna University---------- TJPS College for PG Courses (Guntur, AP)
BSc (C. Sc.)---------- 2007----62%----Regular------Nagarjuna University---------- D.R.N, S.C.V.S (ChilakaluriPet, AP)
M.P.C---------- 2004-----73%----Regular------Board of Intermediate Education------ S.C.V.S Jr. College (ChilakaluriPet, AP)
SSC---------- 2002---- 69%----Regular------Board of Secondary Education-------- HP School (Kollapudi, AP)

MY PROJECTS

Marcel(Publicis Re:Sources Pvt. Ltd, Bangalore)

Publicis Re:Sources provides transformational technology solutions, optimized business services, and a secure environment which enables Publicis Groupe Agencies to deliver award-winning campaigns for their clients.

My Responsibilities

- Technical ownership of the project. Mentoring and managing the Development team.
- Worked on Growth Dashboard, Manager Dashboard, HR Management, People profile, Learning boards.
- Provided solutions for Pipelines and ETL jobs.
- Designed and implemented production-grade AI systems using LangChain and LangGraph to orchestrate complex multi-step reasoning workflows and autonomous agents.
- Built scalable RAG pipelines combining vector databases and LLMs to improve response accuracy by over 40% in enterprise knowledge systems.
- Architected multi-agent systems using LangGraph for task planning, tool calling, and self-correcting execution flows.Developing microservices using Spring Boot, Ktor, or Micronaut frameworks in Kotlin.
- Designed, implemented, and optimized end-to-end Contract Lifecycle Management (CLM) processes across multiple business units.
- Integrated DocuSign CLM with enterprise systems (Salesforce, SAP, Workday, internal APIs) using REST/SOAP.
- Proficient implementation in asynchronous and reactive programming using coroutines, Flow, and Reactor.
- Enterprise LLM Integration
    - Integrated LLM APIs (e.g., OpenAI, Cohere, Anthropic) into Java-based microservices and monoliths using REST endpoints, with secure API key handling and rate-limiting.
    - Created fallback and retry logic to ensure LLM service reliability in production.
- Custom LLM Fine-tuning
    - Led efforts to fine-tune open-source LLMs like GPT-J and LLaMA on domain-specific data (Java error logs, test cases, architecture docs) for improved accuracy.
    - Built custom tokenizers and training pipelines using Hugging Face Transformers.
- Designed and optimized Crew AI workflows by orchestrating specialized AI agents to collaborate on complex problem-solving, ensuring efficiency, scalability, and reduced turnaround time.
- Developed and integrated Crew AI agent frameworks with enterprise applications, enabling automation of tasks such as code generation, data analysis, and decision support.
- Solution Design: I am responsible for designing end-to-end solutions that meet the client's requirements while leveraging AEM's capabilities effectively. This involves understanding the client's business needs, translating them into technical requirements, and architecting solutions that align with best practices and industry standards.
- Architecture Development: They develop the technical architecture for AEM implementations, including defining system components, interfaces, and integration points. This involves selecting appropriate technologies, frameworks, and tools to build scalable, secure, and maintainable solutions.
- System Integration: AEM often needs to integrate with other systems such as Customer Relationship Management (CRM), Enterprise Resource Planning (ERP), and Content Management Systems (CMS). I design integration patterns, protocols, and data models to ensure seamless communication between AEM and other systems.

Primary Technical Stack: Java21, ReactJS and React Native, GCP, NodeJS, Spring framework, Apache Flink, Mulesoft, Matrix, Octa SSO, Redshift, Python 3, Apigee , LangGraph, OneTrust, Securiti.AI, Databricks, Jasper Reports, Data Factory, Hibernate 4.x, SOAP, MERN Stack, OpenShift, Tomcat, JBoss, Chef, AEP, Snowflake, Terraform, GoLang, Airflow, Design patterns, MySQL, Hadoop 2.6, GraphQL, Neo4J, Kong API gateway, Apache Spark 1.5, Kafka 0.8.2, Apache Hana, RabbitMQ, partial TDD, AWS, JUnit, Machine Learning,

FIS Core Banking(Collabera)

FIS has a portfolio of products for the financial services sector, including both retail and investment banking. offers a wide range of financial products and services. FIS is most known for its development of Financial Technology, or FinTech, and as of Q2 2020 it offers its solutions in three primary segments: Merchant Solutions, Banking Solutions, and Capital Market Credit Risk, Market Risk, Solutions. FIS Core banking is a modern, real-time, multi-currency, deposit and loan core banking system. This integrated solution contains a multitude of configurable features designed to meet the unique business and product needs of retail and commercial financial organizations worldwide.

My Responsibilities

- Collaborate with internal stakeholders including compliance, audit, and IT teams to maintain governance.
- Define and implement control mechanisms to mitigate identified risks and improve response plans.
- Document risk management policies, procedures, and audit trails for regulatory and internal audits.
- Support the integration and configuration of enterprise risk systems like Moody's, Oracle FSAA, or FICO.
-
- Continuously evaluate and enhance risk models, processes, and systems to align with changing regulations and market conditions.Worked on the services - Next generation core, Product management, WorldPay, Payments and Cards, Real-time data access, Nostro and Vostro, Account engine, Compliance commercial, Customer checking, Savings, MMDA, Foundational components, Product set, Extended component capabilities, Fis bank fintechs, Enterprise catalog, Limits and exposure, Enterprise customer, Digital channels, Analytics and insights, Regulatory reports, Enterprise alerts, Rate management, Card management, Enterprise pricing reconciliation, Onboarding, Payments, Fraud and risk, Loyalty
- FIS PaaS - Implemented couple of integrations with The FIS solution provides direct access to faster payment schemes, Single Euro Payments Area (SEPA), Bankers' Automated Clearing Services (BACS), and Clearing House Automated Payment System (CHAPS).
- Engineered backend services and databases for a peer-to-peer lending platform, facilitating over $500 million in loans.
- Implemented real-time analytics and reporting tools, enabling data-driven decision-making for business operations.
- FIS PaaS Implementation: Spearheaded the deployment and integration of FIS PaaS solutions, including the migration of legacy systems to FIS' cloud-native architecture. Ensured seamless transition with minimal disruption to business operations.
- Card acquiring, issuing ,Cards implementation, card solutions,processing platforms,a Cards as a Service (CaaS),cards management solutions and platforms, processing platforms

Technical Stack: Java8, Spring framework, GCP, VaR, stress testing, Monte Carlo simulation, scenario analysis, Flexcube, Hibernate 4.x, Multi Thread, Airflow, FICO, SOAP, JQuery, Design patterns, MySQL, MongoDB, RabbitMQ, Hadoop 2.6, GraphQL, Big Query, Ansible Apache Spark 1.5, Kafka 0.8.2, partial TDD, AWS, JUnit

L'Oréal's Salesforce commerce cloud

L'Oréal's B2B marketplace simplifies shopping for beauty professionals. SalonCentric, one of the largest B2B e-commerce marketplaces in the professional beauty industry, makes online purchasing easier for professionals while supporting L'Oréal's business growth goals.

My Responsibilities

- Gathering Client requirements and preparing solution documents.
- Providing walkthrough sessions to dev teams.
- Developed reusable prompt and toolchains enabling intelligent automation across customer support, document processing, and analytics.
- Integrated LLM applications with microservices and REST APIs for real-time AI-driven decision-making.
- Performed system upgrades, production support, troubleshooting, and workflow performance optimization.
- Ensured governance, compliance, and audit readiness across all contract processes in the CLM platform.
- Optimized performance and cost by implementing token management, caching strategies, and selective context retrieval.Resolving independently any production issues resolving as quick as early.
- Identify performance issues and resolve them.
- **GenAI DevOps and MLOps**
  - Designed CI/CD workflows to automate model deployment and prompt updates.
  - Created Dockerized AI microservices with OpenTelemetry-based observability.
- **Cost & Token Optimization**
  - Implemented tools to monitor and analyze LLM API token usage across services.
  - Tuned prompts, context windows, and embedding strategies to reduce cost by ~40% while maintaining performance.
- Conduct development on the SFCC platform using a multi-site SFRA architecture.
- Salesforce Commerce Cloud including headless implementations using OCAPI.
- Providing solutions on Salesforce Lightning , Javascript and Apex
- Commerce FrontEnd Development including CSS/SCSS/SASS, HTML, Lightning Web Components, Javascript

Salesforce Integration: Salesforce B2B with Lightning, Pricing & BI, product content, channel integration, webshops (running on Salesforce CC) and customer service, S4 Hana, Snowflake, Integrate third-party systems like CRM, OMS, or ERP data in e-commerce platforms using middleware,Redshift, native APIs, or API gateways.

ExperienceFlow DNS (ExperienceFlow)

DNS (Digital Network System). Real-time Decisions & Actions Are Essential In Today's World. We deal mainly in Healthcare, Telecom, Manufacturing, eCommerce domains. Each customer who is not happy with their experience is an opportunity lost forever. Each mismanaged order or asset today is a leakage of revenue that will never be recovered.

My Responsibilities

- I worked for DNS(Data Pipelines, Export and Import Data, ML Programs, Framework Design).
- I given solutions very critical issues back-end services working very slow and schedules are stopped with exception
- Given demos/presentation on Setup, Maven Modules Structures, and Deployment process.
- Implemented multi-agent communication strategies within Crew AI to enhance coordination, task delegation, and adaptability for dynamic business needs.
- Conducted performance monitoring and fine-tuning of Crew AI agents, leveraging prompt engineering and reinforcement techniques to improve accuracy, reliability, and domain-specific outcomes.

Primary Technical stack: Mainly used: Java11, Python 3, GoLang ,SnowFlake, Angular 10, ReactJs 15.6, NodeJS CloudFormation, Matrix, Tomcat, JBoss, Neo4J 5.7.0, Akka 2.3.14, DevOps Tools, Ansible, Okta, Spring MVC 3.2, JPA 2.0, SOA APIs, Terraform, Mulesoft, micro services, iOS, Mobile, Azure, GSuite, MuleESB, MongoDB, Kubernetes, Docker, Jenkin, Big Data with Hadoop-2.5 stack and Cassandra, Apache Camel 2.1, AWS and GC.

Frazoo Groceries- eCommerce

E-commerce implementation for a furniture retailer (Hybris B2C ecommerce and B2B). The project involved building a new online storefront based on Hybris multichannel platform 5.1, which includes developing WCMS components for new website, customization of product cockpit, content cockpit and HMC enhancement to support e-commerce requirements, customization of e-commerce Checkout flow integration, Solr configuration, Live chat integration.

My Responsibilities

- Providing technical POCs and workshops in WCMS, Commerce, Okta, Checkout and Cart, Order Management, User Groups, Product and Catalog management, internationalization, BB, BC, Promotions, scenarios, CSC, Cron Jobs, Impexes modules.
- Designed and developed scalable backend services using Kotlin + Spring Boot.
- Implemented coroutine-based asynchronous flows to improve performance and resource utilization.
- Developed REST APIs and integrated external systems with robust error handling.
- Led Kotlin migration projects from Java, improving code readability and reducing boilerplate.
- Create the solution blueprint and own the estimating, sourcing, costing and integration across enterprise.
- Identify client buyer values and prepare solutions accordingly.
- Salesforce integration with orders and fulfillment and store management.

Technical stack: React Native, Core Java11, Apache Solr, partial TDD, Crew AI, Jasper Reports, AWS, Spring framework, JUnit, Hibernate 4.x, Multi Thread, SOAP, JQuery, Design patterns, MySQL, MongoDB, Hadoop 2.6, Ansible, GraphQL, Apache Spark 1.5, Kafka 0.8.2, Apache Storm0.9, Oracle 9, AWS Stack, Jboss4.1, Unix, Linux, JMeter

Eyecare Leaders - Integrity

Eye Care Leaders is a source for ophthalmology-specific EHR and Practice Management systems. With a singular focus on eye care practices, Eye Care Leaders tailors solutions to meet the unique needs of each practice.

My Responsibilities

- I worked for Integrity(advanced-search, codes, coding-engine, config-service, document-generator, emr-erx, integrity vault, patient-educator, uber-data-central).
- **Custom LLM Fine-tuning**

- Led efforts to fine-tune open-source LLMs like GPT-J and LLaMA on domain-specific data (Java error logs, test cases, architecture docs) for improved accuracy.
- Built custom tokenizers and training pipelines using Hugging Face Transformers.

- **RAG (Retrieval-Augmented Generation) Implementation**
  - Built scalable RAG systems using FAISS and ChromaDB integrated into internal Java portals, enabling context-aware responses from LLMs for technical queries.
  - Developed document loaders, chunking strategies, and semantic search filters.
- I given solutions very critical issues back-end services working very slow and schedules are stopped with exception
- Given solutions for complete architecture change, framework and POCs and Phototype implementations.

Primary Technical stack: Mainly used: Java8, GoLang, AEM, ReactJs 15.6 and React Native, Apigee, Akka 2.3.14, DevOps Tools, J2EE1.6, Spring MVC 3.2, JPA 2.0, SOA APIs, Angular 10, GraphQL, micro services, Azure, GSuite, MuleESB, MongoDB, Kubernetes, Docker, Jenkin, Big Data with Hadoop-2.5 stack and Cassandra, Apache Camel 2.1, AWS and GC.

Viridity Energy (Client Ormat Technologies)

VPower 2.0 is a software application consisting of a suite of products that provides actionable information to enable clients to: gain insight into the efficiency of their energy usage, reduce their energy expenditure, and participate in wholesale electricity markets to earn revenue when desired.

My Responsibilities

- Provided Complete end-to-end solution for new architecture change which fulfill the new requirements that should support 2000 customers. 1 million meters and meter groups. Focused instances for prime customers. Support more customized and configurable views and features in microservices passion.
- Deliverable: Technology Architecture in terms of solution documents, HLD, LLD, Technical design, Approach, Options, Pros-Cons, Recommendation, POCs, Demos and Base Project.

Primary Technical stack:Java8, GoLang, React, Scala 2.11, Akka 2.3.14, Spring MVC 3.2, JPA 2.0, SOA APIs, micro services, MuleESB, MongoDB, DevOps tools, Big Data with Hadoop-2.5 stack and Cassandra, Apache Camel 2.1,AWS.

eBBS (electronic Branch Banking System) - Standard Chartered Bank(Scope International)

eBBS is a Core Banking product. It supports both Consumer and Wholesale Banking banking and Operational Risk, Liquidity Risk. This is a dynamic, flexible and highly user-friendly product. It is developed on J2EE and is capable of working on any JDBC Compliant database. It incorporates LDAP User Authentication and supports XML / MQ Gateway.

My Responsibilities

- Pending payment notifications.
- Card payments to other bank transaction process implementation.
- Identify and assess financial, operational, credit, and market risks across BFSI portfolios and processes.
- Develop quantitative models and scoring mechanisms to measure risk exposure using tools like Python, R, or SAS.
- Monitor key risk indicators (KRIs) and generate real-time dashboards using Power BI or Tableau.
- Perform stress testing, scenario analysis, and back-testing to validate risk models and assumptions.
- Ensure compliance with regulatory frameworks such as Basel III, IFRS 9, and local financial authorities.
- Transform the business requirements to technical requirements.
- Implemented FAIR Principles for design and performance.
- Developed Application using cloud technology EC2, Security Group, ALB, Target Groups, AMIs, Snapshots, EBS Volumes, EIPs, ASG, Launch Configuration, VPC- Subnets, Route tables, Internet Gateways, NAT Gateways, Peering Connections, Virtual Private

Technical stack: Core Java17,GCP, SOA, REST and SOAP Web Services, Basel II/III, IFRS 9, COSO ERM, ISO 31000, TDD, Agile, Spring 2.5, Hibernate 3.0,UML, Captain Compliance, DataGrail, Jasper Reports, Apigee , Moody's RiskFoundation, Oracle Financial Services Analytical Applications, Tomcat, WebLogic, Mulesoft, AirFlow, ESB, BPM, EAI, BRMS, SOA Governance, SOA Security, JMS, Design patterns, Flex 3, XML, OpenShift, Axis DB2, JBoss 4, WAS 5.2.1, Unix, Linux

Lufthansa CrewMeals

Crew Meals – an application that interacts with the different systems within Lufthansa to streamline the ordering, canceling, feedback and billing of meals ordered by flight crew. The project responsibilities are

My Responsibilities

- Determining the correct hardware and infrastructure for Hadoop cluster.
- Proper cluster configuration and deployment to integrate with the data centers.
- Load data into the cluster from dynamically generated files using Flume and from RDBMS using Sqoop.
- Configuring the FairScheduler to provide service-level agreements for multiple users of a cluster
- Best practices for preparing and maintaining Apache Hadoop in production.
- Troubleshooting, diagnosing, tuning, and solving Hadoop issues.

Technical stack: Java8, J2EE1.6, Spring MVC 3.2, MuleESB, IIB, EJB 3.1, JPA 2.0, Hibernate 4.1.10, SOA APIs, MongoDB, micro services, Mulesoft, Big Data with Hadoop-2.5 stack and Cloudera, Cassandra, Spark 1.5, Apache Storm0.9, Kafka 0.8.2, Oracle BPM, JBoss EAP 6.3, MYSQL 5.5

NGUI - (Kronos)

It started off with a simple idea: there had to be an easier way to record employee time transactions. And then one innovation led to another and that idea grew into something we now call workforce management. And implementing the HR management, Recruitment tools, and employee payroll, task tracker, project management, time keeping services as pluggable and isolated tools.

My Responsibilities

- Take the functional and non-functional requirements and propose solutions that will be able to meet the requirements.
- Effectively track the integration points in the design to ensure there are no omissions.
- Work with the design team to realize the architecture by providing suggestions on design options.

Technical stack: Flex 4.1, DDD, Core Java, UML, Hibernate3.5, Hyrbis B2C, Cloud (SAAS), Web Services with Axis, JQuery, JMS, Design patterns, MongoDB, XML, AWS components- EC2, SAAS, RDS, S3, Simple DB, SQS, SNS, SES,

CloudWatch, CloudFront, load balancing, Direct Connect, Google App Engine, SaaS, IaaS, Big Data, Hadoop-2.1, SQL server, Jboss4.1, WAS 5.2.1, Unix, Linux, VisualVM, JConsole, Jenkins, Maven, Shell Script.

MATRIX, SIEMENS ENERGY SYSTEM LTD. (United Utilities Water, U.K)

MATRIX (Meter Administration, Tracking, Reading, Inspection/ Interrogation system) is used for supporting its activities for various utility clients.

My Responsibilities

- Picks up new technologies with ease, solves complex technical problems and multitasks between different projects.
- Develops detailed designs with Software Engineer and Screen Designer.
- Assists with design of architectural patterns, design of interfaces and design of Web service.
- Identifies reusable components.
- Develops complex modules of the product.

Technical stack: Core Java, Struts 2.0, TDD, Hibernate3.0, UML2, Agile Scrum, Agile PLM, Multi-Threading, Design Patterns, EJB- Session Bean, JMS, Hibernate, Java Restful Web Services, Flex 2.5, Ant, Jboss4 and WebSphere Application Server V6.1, Oracle 9i, SYBASE, Eclipse 3.2, Unix, Linux, Jenkins, Maven, Shell Script..

MY TECHNICAL PAPERS

My Java 18 New Features Notebook	My Java 21 New features Notebook
My Spring AI Notebook	My Oauth2 Grant Types Notebook
MY Generative AI Notebook	My Java Streams Notebook
My Kafka Notebook	My Spring Boot Notebook
My Python Notebook	My eCommerce Spring Boot GraphQL Application …
My AWS Notebook	My Azure DevOps Notebook
My GCP Notebook	My MongoDB Notebook-2
My Spark Notebook	My Kubernetes Good Notebook
My DevOps & Automation and GitHub …	File
My AWS DevOps Notebook	My Snowflake vs Databricks Notebook
My Core Banking Software Notebook	My eCommerce Domain Notebook
My FinTech Notebook	My Spring Boot 3 and JWT Application Notebook
My GraphQL Notebook	My Spring Controller Vs. RestController Notebook
My eCommerce Spring Boot SAGA Ap…	My Functional Interfaces in Java Notebook
My Agentic AI Notebook	My Spring Scopes & Life Cycle Notebook
My Java 8 Stream API for Employee D…	My LangChain Notebook
