Professional Summary

- Backend Developer with 4+ years of experience in designing and building high-performance, secure, and scalable backend systems.
- Proficient in Node.js, NestJS, TypeScript, and Java for modern backend development.
- Expertise in designing RESTful and GraphQL APIs, microservices architecture, and event-driven systems.
- Experienced in secure authentication, authorization, and SSO using JWT, OAuth2, and Keycloak.
- Strong knowledge of AWS and Azure cloud services, containerization, and orchestration with Docker and Kubernetes.
- Skilled in database design, optimization, and query tuning across MongoDB, PostgreSQL, and MySQL.
- Hands-on experience with DevOps pipelines (GitHub Actions, Jenkins) and monitoring tools for high-availability systems.
- Adept at debugging complex backend issues, optimizing performance, and ensuring code quality using clean architecture principles.

Technical Skills

- **Languages:** JavaScript, TypeScript, C#, Java
- **Frameworks & Libraries:** Node.js, NestJS, Express.js, .NET Core, Spring Boot (Java)
- **APIs:** RESTful APIs, GraphQL, Swagger/OpenAPI
- **Databases:** MongoDB, PostgreSQL, MySQL, Redis
- **Cloud & DevOps:** AWS (S3, Lambda, SQS), Azure, Docker, Kubernetes, GitHub Actions, Jenkins
- **Authentication & SSO:** JWT, OAuth2.0, Keycloak
- **Messaging/Event Systems:** Kafka, Google Pub/Sub
- **Tools:** Git, VS Code, Visual Studio, Postman, Winston, log4net, ELK Stack
- **Methodologies:** Agile, Scrum, Clean Architecture, SOLID Principles

---

Professional Experience

Software Developer
Techouts, Hyderabad | Nov 2021 – Present

Project: SS.COM Migration (Jun 2023 – Present)
Client: Shoppers Stop | Tech: Node.js, NestJS, TypeScript, REST APIs, Winston

- Developed scalable microservices for PDP, Wishlist, Cart, and Reviews modules following clean architecture and SOLID principles.
- Built orchestration layer with custom interceptors and middleware for routing, authentication, and error handling.
- Migrated legacy SAP Hybris services to modern Node.js microservices architecture.
- Implemented structured logging with Winston and integrated centralized monitoring for error tracking and performance metrics.
- Optimized database queries for faster response times and reduced latency in high-traffic services.
- Mentored junior developers, conducted knowledge transfer sessions, and enforced code quality standards.

Project: SS SSO Integration (Jul 2022 – Jan 2023)
Client: Shoppers Stop | Tech: Node.js, Java, Keycloak, JWT, OAuth2

- Implemented enterprise-wide Single Sign-On (SSO) using Keycloak for multiple Shoppers Stop applications.
- Developed token validation middleware and RBAC mechanisms for secure access across microservices.
- Integrated Java-based backend modules with Node.js services for seamless authentication flow.
- Enabled centralized user management and role-based access control, reducing security risks.
- Collaborated with DevOps for secure deployment, automated testing, and monitoring of authentication flows.
- Conducted load testing and optimization of SSO endpoints for high-concurrency scenarios.

Project: Grasim Paints (Aug 2023 – Jan 2024)
Client: EY | Tech: Node.js, NestJS, PostgreSQL

- Developed backend modules for paint manufacturing and sales management system.
- Implemented APIs for order management, inventory tracking, and reporting.
- Participated in requirement analysis, system design, and code review sessions with technical architects.
- Integrated logging and monitoring for production systems to proactively detect failures.

- Improved application performance by optimizing complex database queries and batch processes.

Project: IHCL – SSO Integration (Nov 2022 – May 2023)
Client: Indian Hotels Company Limited | Tech: Node.js, NestJS, JWT, OAuth2

- Developed secure SSO login flow using JWT/OAuth2 for multiple IHCL applications.
- Built token validation and refresh mechanisms to ensure uninterrupted user sessions.
- Integrated third-party identity providers for centralized access management.
- Implemented secure role-based access for different application modules.
- Provided troubleshooting and support for production incidents and authentication failures.

Project: SS Beauty (May 2022 – Nov 2024)
Client: Shoppers Stop | Tech: Node.js, NestJS, Kafka, Google Pub/Sub

- Developed loyalty engine and product microservices for beauty e-commerce platform.
- Migrated event system from Kafka to Google Pub/Sub for enhanced scalability and reliability.
- Integrated with external systems like Loyalty, Wizzy, Quicksilver, and SAP for real-time updates.
- Built APIs for product catalog, inventory, and order enrichment with Kafka/Google Pub/Sub messaging.
- Implemented monitoring, alerting, and logging for high-availability production systems.
- Optimized message processing and database transactions to improve system throughput.

Education

Bachelor of Technology – Mechanical Engineering
Srinivasa Institute of Engineering and Technology, Amalapuram, Andhra Pradesh
Graduated: Jan 2019

Certifications

- Node.js – The Complete Guide (Udemy Certified)

Achievements

- Awarded twice for performance and delivery excellence in SS Beauty project.
- Successfully migrated multiple legacy applications to modern microservices architecture.

Declaration

I hereby declare that the above information is true to the best of my knowledge.
