SENIOR ANALYST

Conversational AI | Generative AI | Dialogflow CX | Kore.AI | Vertex AI

Dynamic professional Software Engineer with over 3 years of Experience in CCAI development using Dialogflow CX (DFCX). My specialization is in building robust Conversational AI solutions enhancing customer friendly features and operational efficiency. My expertise lies in designing and integrating sophisticated DFCX agents. I'm positioned to architect scalable and intelligent back-end solutions, transforming business challenges into seamless, high performing conversational AI Experience.

TECHNICAL SKILLS

- **Language & Framework:** Java , Python , FastAPI
- **Conversational AI Platforms:** Dialogflow CX (DFCX), Generative Playbook, Vertex AI, CCAI
- **Tools & Concepts:** Retrieval-Augmented Generation(RAG) , Conversational Design, Webhook Integration, Telephonic Integration, Natural Language Processing (NLP), Natural Language Understanding (NLU), IVR Integration, Chatbot Development, Intents, Entities, Parameters, Flow, Pages, Routes, Generators, Event handler, Git , Spring Boot , Microservices, LLMs Fine Tuning

WORK EXPERIENCE

Capgemini – Senior Analyst – *Bangalore, Karnataka* 08/12/2022 - Present

CCAI Developer – Client Google - Comcast

Developed CCAI Agent using Dialogflow CX as per client requirements with intricate multi-flow conversational designs, to handle customer queries and request efficiently.

- Developed Dialogflow CX agents with multiple multi flow Conversational designs.
- As per Client requirement, created multiple Visio diagrams organizing complex flows converting to DFCX for smooth development.
- Expertise with CCAI Development tools such as Intents, Entities, DTMF, Session Parameters for dynamic, context-aware interactions.
- Implemented a Generative Playbook for Customer Registration, utilizing natural language instructions to dynamically capture user and leveraging Tool-calling to validate data against backend systems in real-time.
- Developed Robust Flows, optimized conversational flows for user friendly experience including DTMF.
- Engineered Multiple flows including main menu leveraging intents, entities, routes and NLU (natural language understanding)
- Integrated Webhook for seamless API Interactions, to enable a real-time data retrieval and backend operations to personalize user response.
- Conducted regular unit and IVR (Interactive Voice Response) testing to track and ensure performance.

IVR BOT Development / QA Testing: Google – AT&T

- Designed and developed an enterprise-grade chatbot & IVR application using **Dialogflow CX**, leveraging **Playbooks** to orchestrate complex conversational flows.
- Architected conversation flows and page-level navigation based on detailed **Visio flow diagrams** to ensure structured dialogue management.
- Created comprehensive test cases to validate conversation paths, intents, and edge cases; analyzed bot accuracy and performance metrics.
- Identified and resolved post-testing defects, improving overall bot reliability and response precision.
- Enhanced test coverage by designing route-specific and edge-case-driven test scenarios.
- Improved containment rate by analyzing **Dialogflow CX Analytics & Insights**, optimizing intents, routes, and fallback handling.
- Implemented dynamic response generation using **Generative AI capabilities**, enabling context-aware and personalized user interactions.

Personal Projects and POC's

Flight Booking Platform | Dialogflow CX, Google Cloud Platform

- Developed a CCAI Platform streamlining flight bookings, inquiries and secure payment and processing with integrated webhook functionality.
- Designed and implemented right distinct conversational flows (e.g.: Inquiry, Booking, Payment) to address diverse user requirements with the platform.
- Engineered a comprehensive main menu flow incorporating, intents, route groups, and NLU to facilitate intuitive and efficient user transitions and specific functionalities.
- Developed robust and optimized conversational flows by effectively using intent, entities, routes, complemented DTMF.
- Carried out regular Unit and IVR testing to track and ensure performance.

Gen-AI powered Blog Post Generation application

- Developed a **Gen-AI powered Blog Post Generation application** to create high-quality, SEO-optimized content based on user prompts.
- Integrated **LLM APIs** to generate structured blog posts including title, outline, introduction, body, and conclusion.
- Designed prompt-engineering strategies to improve content relevance, coherence, and tone consistency.
- Implemented dynamic content customization (tone, length, audience type, keywords) for personalized blog generation.
- Built backend services for request handling, response processing, and API integration with scalable architecture.
- Applied content validation and filtering mechanisms to ensure safe and appropriate AI-generated outputs
- Deployed the application with user-friendly UI for seamless content generation and editing.

Saurabh Shedabale +91-9343850201

EDUCATION

Rajarajeswari College of Engineering– *Bangalore, Karnataka*
Bachelor of Technology –Computer Science And Engineering, 2022
Kle's G. I. Bagewadi P.U. College–Nipani, *Karnataka*
PUC – 2017
Shri Sai Vidyalaya – *Mangur, Karnataka*
SSLC – 2015

PROFESSIONAL SKILLS

- **Project Management & Methodology:** Agile Methodology, Working in Sprints, Jira, Project Planning, Requirement Gathering
- **Design & Architecture:** Conversational AI Design and Architecture, System Architecture (Visio)
- **Quality Assurance:** Bot testing in DFCX and Playbooks, NLU Accuracy, Intent Resolution Rate, First Contact Resolution (FCR) Rate, Quality Assurance Processes
- **Communication:** Cross-functional team Collaboration, Client Communication.

ACHIEVEMENTS

- Recognized as '**Champion of the Month'** for the month of (Nov ,2025).

CERTIFICATIONS

Google – *Bangalore, Karnataka*
