Rahul Singh
Staff Frontend Developer & Full Stack Consultant
Bengaluru, India |rahulps.singh1@gmail.com | +91-9096806080

Professional Summary

Accomplished Staff Frontend Developer and Consultant with 12 years of experience architecting and delivering high-performance, scalable web applications across OTT, health, finance, insurance, SaaS, mortgage, and e-commerce domains. Renowned for deep expertise in modern JavaScript frameworks, full-stack development, analytics for actionable insights, cloud architecture, and performance optimization, consistently driving innovative solutions for global audiences. Led cross-functional teams to deliver cutting-edge platforms, leveraging analytics tools to optimize user experiences, achieving up to 35% improvements in user engagement, 40% reductions in application latency, and significant revenue growth through seamless, data-driven, accessible user experiences. **Provided strategic consulting for 9 diverse companies,** spearheading technology migrations, system audits, and process optimizations, while mentoring over 30 developers to enhance team capabilities. **Held full-time leadership roles at 5 industry-leading** organizations, implementing DevOps practices, microservices, and design systems to ensure scalability, cross-browser compatibility, and WCAG 2.1 compliance, delivering measurable business impact across industries.

Core Competencies

- **Frontend Technologies**: React, Vue.js, Angular, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Webpack, Vite, Storybook, Blitz, Shaka Player, **Next.js ,** JW Player, Video.js, Bitmovin
- **Backend Technologies**: Node.js, Express, **NestJS**, MongoDB, PostgreSQL, Elasticsearch, Redis, Apache Kafka, AWS SNS, AWS SQS, REST/GraphQL API Development
- **Analytics Tools**: Google Analytics, Amplitude, Mixpanel , MoEngage
- **Architecture & Design**: Micro-frontends, Component-Driven Development, Design Systems, Microservices
- **Tools & Platforms**: Git, CI/CD (Jenkins, GitHub Actions), Docker, AWS, Jest, Cypress, Storybook, Bolt (CMS)
- **DevOps**: Kubernetes, Terraform, Ansible, CloudFormation, Monitoring (Prometheus, Grafana)
- **Leadership**: Team Mentorship, Code Reviews, Agile/Scrum Methodologies, Stakeholder Collaboration
- **Performance & Accessibility**: Web Vitals, Lighthouse, WCAG 2.1, SEO Optimization
- **Consulting**: Technical Strategy, System Audits, Performance Optimization, Technology Migrations

Professional Experience

Staff Frontend Developer
SonyLiv, Bengalru, India
December 17, 2024 -

- Lead a team of 10 frontend developers to enhance SonyLiv's OTT platform, utilizing React for dynamic user interfaces, Next.js for optimized rendering, and Lovable for AI-assisted UI prototyping, delivering seamless experiences to over 20M monthly active users.
- Collaborated on GraphQL API integration with backend teams, leveraging React and Apollo Client to optimize content recommendation and search interfaces, reducing frontend data fetch times by 40% and enhancing user personalization.
- Developed reusable React components for video players and subscription flows, incorporating Lovable's AI-driven prototyping to accelerate UI development by 30% and reduce design-to-development handoff time by 25%, enabling rapid A/B testing and smooth integration with microservices.
- Implemented frontend optimizations using Next.js server-side rendering and Redis-backed caching strategies, achieving Lighthouse scores of 95+ for performance and accessibility, contributing to 99.9% streaming uptime.
- Mentored 6 developers on React and GraphQL best practices through code reviews and workshops, improving frontend code quality and deployment efficiency by 25%.
- Partnered with product and data teams to integrate Amplitude analytics into frontend interfaces for real-time user insights, increasing viewer retention by 15%; utilized Bolt AI prototyping to build 2 web apps for content curation and personalization, boosting user engagement by 20**% (www.sonyliv.com).**

Staff Frontend Developer
Piramal Finance, Mumbai, India
August 10, 2022 – December 16, 2024

- Led a team of 12 frontend developers to build a scalable, customer-facing loan journey platform using React, Next.js, TypeScript, and a microfrontend architecture, reducing loan application processing times by 35%.
- Architected a modular microfrontend system with Next.js for server-side rendering and static site generation, enabling independent feature deployments across loan origination, approval, and repayment modules, cutting release cycles by 30%.
- Developed a custom analytics library integrated with the platform to track user interactions and loan application metrics, providing actionable insights that improved conversion rates by 15%.

- Created a reusable component library with Storybook, streamlining UI development and ensuring consistency across 4+ digital products in the loan journey ecosystem.
- Collaborated with UX designers and product managers to implement a cohesive design system integrated with Storybook, enhancing developer collaboration and brand consistency.
- Mentored 8 junior developers through code reviews and technical workshops on microfrontends, Next.js, and component-driven development, improving team productivity and code quality by 20%.
- Optimized frontend performance for the loan journey platform, achieving a 95+ Lighthouse score for accessibility, SEO, and Web Vitals, enhancing user satisfaction.
- Delivered the platform accessible at **www.piramalfinance.com**, driving digital engagement for loan services.

Staff Frontend Developer
LeadSquared, Bengaluru, India
June 2021 – August 2022

- **Led a team of 8 frontend developers as a Staff Developer to deliver SIERA, a SaaS reporting and analytics platform, using React, TypeScript, NestJS, and a microfrontend architecture, enabling real-time data insights for 2000+ enterprises.**
- Designed and implemented a modular component library with Storybook, supporting 50+ customizable report templates and improving team development efficiency by 25%.
- Architected microfrontend modules for SIERA's dashboard and report builder, reducing rendering times by 40% and enabling seamless integration with LeadSquared's CRM.
- **Developed scalable backend APIs using NestJS, optimizing data processing and retrieval for dynamic reports, improving API response times by 30%**
- Collaborated with data engineers to integrate GraphQL APIs, optimizing data retrieval for dynamic reports and enhancing user experience for sales and marketing teams.
- **Mentored 5 team members on advanced React patterns, NestJS best practices, and CI/CD workflows, increasing team delivery speed by 15%.**
- Contributed to the platform accessible at **siera.leadsquared.com** and integrated with LeadSquared's core SaaS offering at **www.leadsquared.com**, driving sales efficiency for high-velocity businesses.

Senior Frontend Developer & Core Developer
Viu, Hong Kong
September 2016 – May 2021
- Led a team of 10 frontend developers to enhance Viu, an OTT video streaming service, using React and TypeScript, supporting 10M+ monthly active users across Asia with premium Asian content.
- Developed reusable UI components for video players, recommendation widgets, and subscription interfaces, reducing development time for new features by 30%.
- Integrated REST APIs and AWS media services to deliver seamless video streaming, achieving 99.8% uptime and enhancing user engagement by 20%.
- Mentored 6 developers on modern frontend practices, including unit testing with Jest, achieving 90% code coverage for critical components.
- Optimized the platform for accessibility (WCAG 2.1) and SEO, increasing organic traffic by 15%, accessible at **www.viu.com**.

Frontend Developer
Xoriant Solutions, Pune, India
March 2015 – September 2016
- Developed the frontend for Encompass, a Mortgage Platform for loan origination and management, using AngularJS and JavaScript, streamlining mortgage processing for 500+ financial institutions.
- Built reusable UI components for loan application workflows, reducing development time for new mortgage features by 25%.
- Collaborated with backend teams to integrate RESTful APIs, ensuring seamless data flow for loan processing and compliance modules within the Mortgage Platform.
- Implemented responsive designs with CSS3 and Bootstrap, achieving 95% cross-browser compatibility and enhancing user experience for mortgage professionals.
- Contributed to performance optimizations, reducing page load times by 20% through code splitting and lazy loading, with the platform accessible at **www.xoriant.com**.

Frontend Developer
IGATE, Pune, India
February 2013 – February 2015
- Developed frontend solutions for clients MetLife and McDonald's, using HTML5, CSS3, jQuery, and AngularJS, enhancing digital interfaces for insurance and fast-food retail applications.

- Built responsive web interfaces for MetLife's customer portal, improving user engagement for insurance policy management by 20%.
- Designed interactive UI components for McDonald's internal ordering system, streamlining employee workflows and reducing order processing time by 15%.
- Collaborated with client teams to integrate RESTful APIs, ensuring seamless data exchange between frontend and backend systems.
- Contributed to cross-browser compatibility and performance optimizations, achieving 90% test coverage with Jasmine, with services accessible at **www.igate.com**.

Consulting Experience

Full Stack Development Consultant
Various Clients (9 Companies), Remote & On-Site

- **Turing (Tech Talent Platform): Developed a vetted system for talent evaluation at www.turing.com, using React for an intuitive frontend and NestJS, Express, and MongoDB for a robust backend. Architected scalable APIs with NestJS, implementing modular controllers and services to handle candidate assessment workflows, improving API maintainability by 25%. Integrated automated testing with Jest and optimized MongoDB queries with indexes,** enhancing candidate matching accuracy by 30%. Mentored 4 developers on full-stack best practices, **including NestJS dependency injection and TypeScript**, and collaborated with product teams to enhance user workflows, reducing onboarding time by 20%. Optimized frontend performance by implementing lazy loading and code splitting, reducing initial page load times by 25% and improving Lighthouse **performance scores to 90+.**

- **SonyLiv (OTT)**: Led the migration from Angular to React for the client-facing OTT platform at **www.sonyliv.com**, utilizing Bolt CMS for efficient video content management and Blitz for rapid UI development. Spearheaded smart TV app development with React, integrating Node.js, Elasticsearch, Redis, AWS SNS, and SQS to ensure scalable backend services for 15M+ monthly users. Improved page load speeds by 35% through performance optimizations, including image optimization and caching strategies, enhancing user retention by 10%. Mentored 5 developers on modern React patterns, enhancing team delivery efficiency.
- **Diagnal Technology (OTT)**: Developed a WCAG-compliant OTT platform for **www.diagnal.com**, leveraging ReactJS for responsive interfaces and focusing on smart TV app development. Implemented adaptive streaming components and integrated REST APIs for content delivery, increasing user retention by 20%. Conducted accessibility audits to ensure WCAG 2.1 compliance and mentored 3 developers on React best practices, improving code quality by 15%. Optimized frontend performance using lazy loading for video thumbnails and WebP image formats, reducing bandwidth usage by 30%.
- **Gspann (Ecommerce)**: Built a TypeScript-based design system for the e-commerce platform **www.menswearhouse.com**, using React, Next.js, and Node.js to enhance the frontend and backend. Integrated payment gateways (Stripe, PayPal) to streamline checkout processes, reducing cart abandonment by 25%. Collaborated with UX teams to implement responsive designs and mentored 4 developers on TypeScript, cutting UI development time by 30% across 3 applications. Optimized frontend by minimizing bundle sizes with Vite and tree-shaking, improving page load times by 20%.
- **Stand8 (Media)**: Optimized a video streaming platform for NBC at **www.stand8.io**, utilizing JavaScript and Shaka Player to implement efficient video playback for millions of users. Enhanced streaming performance by integrating adaptive bitrate streaming, reducing bandwidth usage by 25%. Conducted performance audits with Lighthouse and collaborated with backend teams to integrate REST APIs, improving content delivery speed by 20%. Implemented frontend optimizations like deferred script loading and CSS minification, achieving a 15% reduction in Time to Interactive.
- **Connect and Heal (Health Tech)**: Architected a micro-frontend solution for a comprehensive health management module at **www.connectandheal.com**, using ReactJS to develop features like telemedicine, appointment scheduling, and health records. Enabled independent team deployments, cutting release cycles by 40%. Integrated GraphQL APIs for efficient data fetching and mentored 5 developers on micro-frontend architecture, boosting team scalability. Optimized frontend performance with code splitting and dynamic imports, reducing initial render times by 25% and improving user satisfaction.
- **Vdx.tv (Advertising)**: Revamped the company wiki into a React-based platform for **www.vdx.tv**, improving internal knowledge management for 200+ employees. Implemented server-side rendering and conducted performance audits to boost SEO rankings, increasing organic traffic by 15%. Integrated Markdown support and collaborated with content teams to streamline documentation workflows, reducing update times by 20%. Optimized frontend by implementing client-side caching and lazy loading of non-critical components, decreasing page load times by 18%.
- **Sonata Software (Ecommerce)**: Developed a React-based e-commerce platform for **www.sonata-software.com**, integrating GraphQL APIs to enhance product catalog and checkout functionalities. Improved data fetching efficiency by 50% and implemented responsive designs with Tailwind CSS, increasing mobile user engagement by 25%. Mentored 3 developers on GraphQL and React, streamlining development processes. Optimized frontend performance with image lazy loading and optimized CSS delivery, reducing First Contentful Paint by 20%.
- **Thoughtfocus (Ecommerce)**: Led a jQuery-to-React migration for an e-commerce dashboard at **www.thoughtfocus.com**, enhancing user experience for a retail platform serving 100K+ monthly users. Implemented

Redux for state management and optimized frontend performance, reducing maintenance costs by 25%. Collaborated with backend teams to integrate REST APIs and mentored 4 developers on React best practices. Applied frontend optimizations like bundle splitting and critical CSS inlining, improving page load speeds by 22%.

Education

Master of Technology (M.Tech)
Birla Institute of Technology and Science (BITS), Pilani, India
Graduated: May 2014

Bachelor of Technology (B.Tech)
Kavikulguru Institute of Technology and Science (KITS), Nagpur, India
Graduated: May 2012
