STAFF SOFTWARE ENGINEER

Senior Frontend Engineer with 9+ years of experience building scalable web platforms using React, Next.js, and TypeScript. Skilled in architecture design, performance tuning, and team mentorship, with a focus on advancing into technical leadership roles driving engineering and product alignment.

SKILLS

JavaScript, TypeScript, Angular, ReactJS, NextJS, HTML5, CSS3, NodeJS, REST APIs, Google Cloud Platform, Docker

WORK EXPERIENCE

STAFF SOFTWARE ENGINEER *October 2022 – February 2025*

COINDCX - *Remote, India*

- Architected web solutions for multiple business verticals using Angular, NextJS, and implemented micro-frontend practices. Improved performance bottlenecks by above 25% through tracking Web Vitals and optimizing user experience funnels.
- Designed and built scalable web applications as high frequency trading (HFT) terminal with high volume socket updates, central growth gamification platforms for faster GTM and acquisition funnel.
- Deployed multi-campaign backend microservices on GCP using Firebase + cloud functions and NodeJS for creating lead generation funnels for growth and marketing campaigns, and optimized DB operations to handle thousands of concurrent requests using RESTful API Architecture.
- Implementing RUM and Log Monitoring to frontend application to benchmark application metrics and defining business impacting KPIs such as user load times, user device information, error stack traces using tools like Google Firebase, Datadog, and setup Alerting system and Custom reporting dashboards using Grafana etc.
- Enforced stringent code review processes and best practices across teams, resulting in a significant reduction in time taken for peer review and in resolving security vulnerabilities. Created CI/CD Dockerfile scripts for automated code quality checks.
- Created Engineering processes and practices with the team and implemented SDLC dashboards for quicker cross team updates, reducing the project delivery timelines.
- Implemented testing framework using Jest and integrated it within CI/CD pipelines, boosting code coverage from 0% to 85% (average) across multiple repositories.

SENIOR SOFTWARE ENGINEER-*2* *April 2022 – September 2022*

COINDCX - *Remote, India*

- Guided a team of 7 developers as Lead, responsible for handling frontend web frameworks across desktop and mobile applications that can handle highly dynamic data streams and real-time trade data traffic.
- Designed and implemented multiple Micro-frontends for payment systems, Crypto SIP, Crypto baskets, and cross-org libraries, implementing parallel frontend delivery systems and increasing reusability across products.
- Helped build web applications for the platform team for optimizing stream data for the web trading terminal that handles 1200+ socket connections/min and reduced the payload/socket response by 40%.
- Responsible for building discovery modules in the fiat-crypto ecosystem, which provided sustained investment opportunities for long-time investors and increased user traffic by ~35%.
- Responsible for creating backend services using firebase cloud functions for marketing campaigns that lead to acquiring 47000 leads for new users/campaigns at peak traffic enhancing user acquisition by 15% through optimized real-time data handling.

SENIOR SOFTWARE ENGINEER *July 2021 – March 2022*

COINDCX - *Remote, India*

- Designed and implemented Micro-Frontend Architecture, where the Single Page Application module in a Monolith Architecture is segregated into multiple single responsibility modules using SOLID principles.
- Mentored a team of 5 developers, responsible for implementing highly interactive marketing sites and trading features for cryptocurrency exchanges using our application.
- Worked on crypto trading web platform, deposit and withdrawal modules for fiat/cryptocurrency exchange; a first of its kind on the crypto industry
- Responsible for handling product release pipelines via source version control, maintaining code standards, implementing branching strategies and code deployment scripts, providing UI/UX consultations whilst working with product owners to deliver high quality features to the users.

SOFTWARE ENGINEER *August 2018 – June 2021*

DMI (DIGITAL MOBILE INNOVATIONS) PRIVATE LTD. LLC - *Chennai, India*

- Design and establish user-friendly, single page applications for clientele across different business domains on web and mobile platforms using popular frameworks like Angular, React, Nativescript.
- Developed web applications to handle large concurrent user traffic, improved page views, improve ecommerce experience, resulting in increase in revenue by 24%, and increase in user traffic by 20%.
- Developed a steel market visual dashboard for trend analysis, reducing data processing time by 300%, and implemented Azure functions for on-demand computing, enhancing decision-making for clients.
- Created cross platform mobile applications using NativeScript for facilitating the client's ecommerce needs via iOS and Android devices and making it cohesive with their web application.
- Established application source version and code maintenance strategies using Git, linter libraries and implemented build optimizations such as Tree Shaking, Ahead-of-Time Compilation methods etc.
- Led a team of 8 as a Lead, training them in web application functions and strategies, including steps to make tech stack upgrades, make updates/changes independently.
- Develop and maintain projects end to end of the software life cycle for 5 projects of the company, with 100% on-time delivery and utilized different technology stacks depending on the requirement and budget.

SOFTWARE DEVELOPER *January 2016 – May 2018*

GOLD COAST IT SOLUTIONS – *Fairfax, VA, USA*

- Provided software solutions to multiple clients across the US including Cisco Systems, Fifth-Third Bank, on their web application.
- Developed web applications that handled operations and sales modules, improving the ecommerce experience.
- Design and implement improvements on VoIP services on the Portal User Interface, thereby improving the customers user experience.
- Proactively communicate with the UX design team and the product owners to implement state-of-the-art design features and trends such as long scrolling, lazy loaded content instead of pagination etc.
- Implemented business analytics solutions and user haptics event handling to monitor and provide analysis on user interface pattern to enhance their experience with application updates.
- Worked using agile methodology SDLC in a high paced test-driven development environment.

SOFTWARE DEVELOPER *INTERN* *July 2015 – December 2015*

3S BUSINESS CORPORATION INC – *Houston, TX, USA*

- Initiated and implemented technology stack upgrade for the company's legacy system from JSP to JavaScript + JQuery framework, thereby enhancing the user interface experience and fulfilling the tech debt.
- Worked on Java, Spring framework, Hibernate, MySQL and created entities, DAOs, controllers and service layers for the company's workforce portal.
- Created interactive, responsive web pages using HTML, CSS and vanilla JavaScript, media queries.
- Worked closely with project manager, Team Lead and the other developers to ensure the stories were delivered on time with complete specs

EDUCATION

MASTER OF SCIENCE in COMPUTER SCIENCE

UNIVERSITY OF NORTH CAROLINA AT CHARLOTTE – CHARLOTTE, NC, USA

BACHELOR OF ENGINEERING in COMPUTER SCIENCE AND ENGINEERING

VELAMMAL ENGINEERING COLLEGE (aff.: ANNA UNIVERSITY) – CHENNAI, TN, INDIA
