SUMMARY

I'm a **Frontend Developer with over 9 years of experience**, specializing in building **enterprise-grade web applications** and **consumer-facing solutions**. I've worked across a wide range of environments—from early-stage startups to well-established companies—and thrive in **fast-paced, agile product development** settings.

My core expertise lies in **JavaScript and its ecosystem**, with hands-on experience using frameworks and libraries such as **AngularJS, Angular, Ember.js, and React**. Beyond UI development, I've contributed to **REST client tools**, **build process optimization**, and even **database interactions**, giving me a broad, full-stack perspective.

I have a strong passion for **architectural design and refactoring**. I enjoy taking the lead on projects, driving them from initial concept to a polished, impactful product that delivers real value to users and businesses alike.

EXPERIENCE

Principal Engineer User Interface

Boomi — **May 2024 - Present, Bengaluru, Karnataka, India**

- Leading the **Design System team**, overseeing the development and maintenance of **two core UI libraries** widely used across the Boomi application ecosystem.
- Spearheading **process improvements** for component development and delivery, streamlining workflows and reducing release cycle time.
- Collaborated with cross-functional teams (Product, Engineering, and Design) to ensure consistency, accessibility, and scalability of the design system.
- Championed code quality and best practices, introducing documentation standards and review processes.
- Lead junior engineers, fostering growth through code reviews, pair programming, and knowledge-sharing sessions.

Senior Frontend Engineer

Appsmith — **August 2021 - April 2024**

- Led the Widgets team, responsible for creating and maintaining core UI components used across the Appsmith platform.
- Designed and implemented the Custom Widgets feature, enabling users to dynamically build, register, and use custom widgets within the platform.
- Rewrote the Table widget, one of the platform's most heavily used components, resulting in significant improvements in performance and user experience.
- Architected enhancements to the widget infrastructure, improving scalability, maintainability, and extensibility across the codebase.
- Spearheaded a team focused on usage, licensing, and billing, implementing systems to track user activity and bill them based on that.
- Played a cross-functional role as an early engineer, contributing to multiple areas of the product and helping shape the company's engineering culture.
- One of top contributor to the Appsmith open-source project.

Senior Software Engineer

Dell Boomi — **January 2020 - July 2021, Bengaluru Area, India**

- Transitioned to **Dell Boomi** as part of Unifi's acquisition, continuing in the same role with the **entire product team**.

Software Engineer

UNIFI Software — **December 2015 - January 2020, Bengaluru Area, India**

- In my role as a frontend developer, I primarily focus on maintaining a substantial existing codebase, introducing new features across the front-end, and contributing to the design of the front-end architecture.
- I'm currently spearheading a major initiative to transition from AngularJS to Angular.
- One of the significant challenges I've encountered pertains to web browser performance when handling extensive datasets.
- To address this, I've been dedicated to optimizing our codebase and exploring various JavaScript concepts and features such as virtual lists and web workers to mitigate browser limitations and enhance performance.
- Within the AngularJS ecosystem, I've gained hands-on experience and have designed and developed numerous components to address common issues and streamline processes across modules.
- Furthermore, I've been involved in extensive research and development efforts, leading to the implementation of front-end modules that span diverse areas, including user experience enhancements, data visualization, REST clients, unit testing, build tools, and more.
- In addition to my technical contributions, I have taken on mentoring and code review responsibilities, collaborating with fellow developers within our team.
- My work has also involved collaboration with cross-functional teams, including Design, Product, Build, and Back-End, to ensure seamless project execution and alignment with the company's goals.

Web Developer

dZine-hub — **November 2014 - November 2015**

- As a junior developer, I took on the responsibility of creating Magento modules and user interfaces that adhered to community standards and coding best practices.
- My primary focus was enhancing the user experience by optimizing the user interface.
- I gained significant experience working with PHP, HTML, CSS, and JavaScript.
- One of my notable projects included the development of the company website.

EDUCATION

Bachelor of Engineering (B.E.), Computer Science

DMI college of engineering • 2010 - 2014

class-XII, Computer Science

Sri Bharathidasan matriculation and higher secondary school • 2009 - 2010

SKILLS

Technical lead

JavaScript, HTML5

JavaScript

AngularJS, Angular, Ember.js, and React
