Yogen Aggarwal

Sr Software Engineer | Material+ | Ruby on Rails | Turbo - Hotwire | Docker | AWS

+91 8097767601 | in.yogen@gmail.com | linkedin.com/in/yogen-aggarwal/ | Mumbai (willing to relocate)

Summary

Highly accomplished **Sr Software Engineer** with over **10 years of experience**, specialising in building robust applications with **Ruby on Rails**, **JavaScript**, and **PostgreSQL**. Adept at designing architecture and leading development initiatives to boost user engagement, streamlining documentation and processes successfully **reducing onboarding time from 2 weeks to 3 days**. Expertise in **AWS**, **Docker**, and implementing complex solutions like **Multi-Tenant Architecture** and custom offer systems. Contributed significantly to diverse projects including a medical inventory management system, a beauty e-commerce app, and a lending platform, achieving **100% test coverage** through TDD practices. Proficient in integrating third-party services and API development.

Skills

Primary Skills

Ruby | Ruby on Rails | JavaScript | Typescript | React | HTML | CSS | PostgreSQL | Docker | AWS

Secondary Skills

AWS | Tailwind CSS | Bootstrap | Python | Redis | Django | Postman | Angular | Elixir | Dotnet

Ruby on Rails Specific Skills

Rails 6 | Rails 7 | Rails 8 | Active Record | Apartment | Hotwire-Stimulus JS | Turbo JS | Devise | Active Admin | Active Storage | ActiveJob | Sidekiq | Resque

Work Experience

Senior Software Engineer

2024 - 2025

Material+ (Srijan Technologies Pvt Ltd) — Remote

- Worked on a Video Chat Scheduling Platform for Survey Participants of Marketing Research Studies using latest Rails technologies like **Turbo and Hotwire.**
- Worked on a community platform **Icanmakeitbetter**, an Insights platform supporting around **20 communities.**
- Supported the technology platform built with ROR and Elixir handling studies with more than **500000 participants**.
- Supported the platform with **near to zero downtime** and a **TAT of 24 hours** on technical issues faced on the platform by researchers or participant users.
- Contributed to the development of 'Muse', an **AI platform feature** allowing researchers to simulate conversations with custom AI personas, enhancing the **Muse chat UI design** through **3-4 iterative improvements**.
- Acquired proficiency in React/Vite/DotNet within **2** months using AI tools, contributing to project success and expanding technical skill set beyond core stack.

Lead Engineer

2022 - 2024

Ekanek Networks Pvt Ltd

- Designed and implemented core architecture and key features **(Routines, Foxy Edge)** for the **Foxy Beauty E-commerce app**, resulting in **90-100 participants** and a **1000+ users** signing for the loyalty program first **3 months** post-launch.
- Developed and launched backend APIs in Ruby on Rails, enabling seamless integration with React-Native mobile apps and supporting over **10000 monthly active users**.
- Enhanced user retention and engagement through features such as **Product Back in Stock notifications** and revamped **Email/SMS/Push Notifications**.
- Led development of a white label solution, AppX, enabling customized apps for **D2C brands with Shopify sites**.
- Implemented a multi-tenant architecture using the Apartment gem, and enabling support for **4-5** distinct client applications within a single codebase.
- Reduced onboarding time for new brands **from 2 weeks to 3 days** by documenting and creating a stepwise onboarding guide.

- Implemented a custom offer system with a Rule engine to match Selling Prices and available offers to brand Shopify websites.

Web Development Consultant

2021 - 2022

APM Help

- Spearheaded the development of a lending platform that facilitated over **$900,000** USD in homeowner credit lines for property renovations, enabling property managers to retrieve renovation loan amounts via tenant rent payments on an EMI basis.
- Developed and deployed a Ruby on Rails API-only application with an **Active Admin** Interface, serving over **100** moderator users and streamlining moderation tasks.
- Deployed a React application on AWS Elastic Beanstalk, leveraging RDS PostgreSQL and Elasticache Redis for database and caching, integrated CloudWatch for monitoring, and utilized AWS Amplify, resulting in a **50%** reduction in deployment time.
- Deployed **Auth0 SSO** solution to **4** company products, enhancing user experience and security for **11-12K** users.
- Addressed system fragility by implementing **Redis auto-expiring keys**, enhancing **robustness and security** while achieving **cost reductions**.

Product Developer

2019 - 2021

Curve Tomorrow

- Migrated a legacy Rails **3** application to Rails **5**, resolving **compatibility challenges** and improving **system performance**.
- Contributed to frontend and backend development of WeGuide, a no-code digital health platform supporting about **55** clinicians and facilitating patient engagement in clinical studies, resulting in a **significant** increase in patient adherence.
- Developed intuitive **UI** for patient forms, implementing a **scheduling**, **reminder**, and **notification system** that improved patient engagement.
- Implemented **TDD** practices, resulting in **100%** unit test coverage and enhanced code quality.
- Mastered **HL7 data parsing**, enabling efficient processing **of patient records** to improve data integrity.

Software Engineer

2018 - 2019

Hashtag Loyalty

- Developed a **Ruby on Rails** API backend for a restaurant table management system, streamlining **reservation** and walk-in management and enhancing operational efficiency by **30%**, with comprehensive **Swagger** API documentation.
- Designed and developed the floor layout planner using **Angular 2, SVG shapes and Mathematics** to represent different seating options.
- Optimized delivering monthly reports for **1000+ merchants** by engineering a **Ruby** and **Redis** caching pipeline, slashing generation time from **more than 24 hours to a few minutes**.
- Optimized **postgresql** database queries, leading to a **15%** performance improvement.

Lead the development

2016 - 2018

Avegen Healthcare Pvt Ltd

- Spearheaded the development of the **Together For Her** review platform, leveraging **Rails 5**, **React**, **Redux**, and **Elasticsearch** to enhance clinic/hospital data management.
- Developed a **WordPress** integration for the **Rails** website, enabling content teams to create engaging content **20% faster** by leveraging their preferred framework.
- Implemented **Google Tag Manager** to streamline data collection, enabling **Universal Analytics**, **Mixpanel**, **Heap Analytics**, and **Facebook Pixel** integration for enhanced user behavior analysis.
- **Enhanced digital marketing strategy execution**, enabling **Product** and **Marketing** teams to achieve a good user analytics funnel making it easier to track and mitigate drop-offs.

Developed backend APIs

2015 - 2016

Nice App

- Developed and deployed backend APIs using Ruby on Rails and Spree Commerce, supporting an e-commerce platform that processed over **$100,000** USD in transactions annually and served **60000+** users.
- Addressed **low user participation** by developing and launching **push notifications** and **email campaigns** for a **100+ YouTuber giveaway**, increasing **concurrent users** from <10 to >**90**.

Intern

2015 - 2015

Racknole Technologies - AppHive

- Developed backend REST APIs using Python-Django to ingest **1,000,000+** Google Play Store app listings, powering a new App Discovery Platform with real-time data and enabling downstream analytics.

Projects

Code Mentor

- **5 star codementor** (https://www.codementor.io/@inyogen)

Upwork Freelancing

- Average Rating above **4.5**

Bug fixing contests on Topcoder

- **3 contests** won in the **F2F (first to finish)** section

Language

English	Hindi
Native	Native

Education

Bachelor of Engineering in Information Technology

2011 - 2015

Mumbai University
